
python-stix Documentation

Release 1.1.1.7

The MITRE Corporation

November 02, 2016

1	Versions	3
2	Contents	5
2.1	Installation	5
2.2	Getting Started	6
2.3	Examples	8
2.4	APIs or bindings?	14
3	API Reference	17
3.1	API Reference	17
3.2	API Coverage	56
4	Contributing	61
5	Indices and tables	63
	Python Module Index	65

Version: 1.1.1.7

The **python-stix** library provides an API for developing and consuming *Structured Threat Information eXpression* (STIX) content. Developers can leverage the API to develop applications that create, consume, translate, or otherwise process STIX content. This page should help new developers get started with using this library. For more information about STIX, please refer to the [STIX website](#).

Note: These docs provide standard reference for this Python library. For documentation on *idiomatic* usage and *common patterns*, as well as various STIX-related information and utilities, please visit the [STIXProject at GitHub](#).

Versions

Each version of `python-stix` is designed to work with a single version of the STIX Language. The table below shows the latest version the library for each version of STIX.

STIX Version	python-stix Version
1.1.1	1.1.1.7 (PyPI) (GitHub)
1.1.0	1.1.0.6 (PyPI) (GitHub)
1.0.1	1.0.1.1 (PyPI) (GitHub)
1.0	1.0.0a7 (PyPI) (GitHub)

Users and developers working with multiple versions of STIX content may want to take a look at [stix-ramrod](#), which is a library designed to update STIX and CybOX content.

Check out the [Working with python-stix](#) section for examples on how to integrate **stix-ramrod** and **python-stix**.

Version: 1.1.1.7

2.1 Installation

The installation of python-stix can be accomplished through a few different workflows.

2.1.1 Recommended Installation

Use `pypi` and `pip`:

```
$ pip install stix
```

You might also want to consider using a `virtualenv`. Please refer to the [pip installation instructions](#) for details regarding the installation of `pip`.

2.1.2 Dependencies

The python-stix library relies on some non-standard Python libraries for the processing of STIX content. Revisions of python-stix may depend on particular versions of dependencies to function correctly. These versions are detailed within the `distutils setup.py` installation script.

The following libraries are required to use python-stix:

- `lxml` - A Pythonic binding for the C libraries `libxml2` and `libxslt`.
- `python-cybox` - A library for consuming and producing CybOX content.
- `python-dateutil` - A library for parsing datetime information.

Each of these can be installed with `pip` or by manually downloading packages from PyPI. On Windows, you will probably have the most luck using [pre-compiled binaries](#) for `lxml`. On Ubuntu (12.04 or 14.04), you should make sure the following packages are installed before attempting to compile `lxml` from source:

- `libxml2-dev`
- `libxslt1-dev`
- `zlib1g-dev`

Warning: Users have encountered errors with versions of libxml2 (a dependency of lxml) prior to version 2.9.1. The default version of libxml2 provided on Ubuntu 12.04 is currently 2.7.8. Users are encouraged to upgrade libxml2 manually if they have any issues. Ubuntu 14.04 provides libxml2 version 2.9.1.

2.1.3 Manual Installation

If you are unable to use pip, you can also install python-stix with [setuptools](#). If you don't already have setuptools installed, please install it before continuing.

1. Download and install the [dependencies](#) above. Although setuptools will generally install dependencies automatically, installing the dependencies manually beforehand helps distinguish errors in dependency installation from errors in stix installation. Make sure you check to ensure the versions you install are compatible with the version of stix you plan to install.
2. Download the desired version of stix from [PyPI](#) or the GitHub [releases](#) page. The steps below assume you are using the 1.1.1.7 release.
3. Extract the downloaded file. This will leave you with a directory named stix-1.1.1.7.

```
$ tar -zxvf stix-1.1.1.7.tar.gz
$ ls
stix-1.1.1.7 stix-1.1.1.7.tar.gz
```

OR

```
$ unzip stix-1.1.1.7.zip
$ ls
stix-1.1.1.7 stix-1.1.1.7.zip
```

4. Run the installation script.

```
$ cd stix-1.1.1.7
$ python setup.py install
```

5. Test the installation.

```
$ python
Python 2.7.6 (default, Mar 22 2014, 22:59:56)
[GCC 4.8.2] on linux2
Type "help", "copyright", "credits" or "license" for more information.
>>> import stix
>>>
```

If you don't see an ImportError, the installation was successful.

2.1.4 Further Information

If you're new to installing Python packages, you can learn more at the [Python Packaging User Guide](#), specifically the [Installing Python Packages](#) section.

Version: 1.1.1.7

2.2 Getting Started

This page gives an introduction to **python-stix** and how to use it.

Note: This page is being actively worked on; feedback is always welcome.

2.2.1 Prerequisites

The python-stix library provides an API for creating or processing STIX content. As such, it is a developer tool that can be leveraged by those who know Python 2.6/2.7 and are familiar with object-oriented programming practices, Python package layouts, and are comfortable with the installation of Python libraries. To contribute code to the python-stix repository, users must be familiar with [git](#) and [GitHub pull request](#) methodologies. Understanding XML, XML Schema, and the STIX language is also incredibly helpful when using python-stix in an application.

2.2.2 Your First STIX Application

Once you have installed python-stix, you can begin writing Python applications that consume or create STIX content!

Note: The *python-stix* library provides **bindings** and **APIs**, both of which can be used to parse and write STIX XML files. For in-depth description of the *APIs*, *bindings*, and *the differences between the two*, please refer to [APIs or bindings?](#)

Creating a STIX Package

```
from stix.core import STIXPackage, STIXHeader    # Import the STIX Package and STIX Header APIs

stix_package = STIXPackage()                     # Create an instance of STIXPackage
stix_header = STIXHeader()                      # Create an instance of STIXHeader
stix_header.description = "Getting Started!"      # Set the description
stix_package.stix_header = stix_header           # Link the STIX Head to our STIX Package

print(stix_package.to_xml())                    # print the XML for this STIX Package
```

Parsing STIX XML

```
from stix.core import STIXPackage               # Import the STIX Package API

fn = 'stix_content.xml'                        # The STIX content filename
stix_package = STIXPackage.from_xml(fn)         # Parse using the from_xml() method
```

2.2.3 Examples

The python-stix GitHub repository contains several example scripts that help illustrate the capabilities of the APIs. These examples can be found [here](#). Accompanying walkthrough [slides](#) are available. These scripts are simple command line utilities that can be executed by passing the name of the script to a Python interpreter.

Example:
\$ python ex_01.py

Note: You must install python-stix before running these example scripts.

Version: 1.1.1.7

2.3 Examples

This page includes some basic examples of creating and parsing STIX content.

There are a couple things we do in these examples for purposes of demonstration that shouldn't be done in production code:

- When calling `to_xml()`, we use `include_namespaces=False`. This is to make the example output easier to read, but means the resulting output cannot be successfully parsed. The XML parser doesn't know what namespaces to use if they aren't included. In production code, you should explicitly set `include_namespaces` to `True` or omit it entirely (`True` is the default).
- In some examples, we use `set_id_method(IDGenerator.METHOD_INT)` to make IDs for STIX constructs easier to read and cross-reference within the XML document. In production code, you should omit this statement, which causes random UUIDs to be created instead, or create explicit IDs yourself for STIX constructs.

See the [STIX Idioms](#) documentation for more great examples of how to use **python-stix**.

2.3.1 Creating a STIX Package

```
from stix.core import STIXPackage, STIXHeader
from stix.utils import IDGenerator, set_id_method

set_id_method(IDGenerator.METHOD_INT) # For testing and demonstration only!

stix_package = STIXPackage()
stix_header = STIXHeader()
stix_header.description = "Getting Started!"
stix_package.stix_header = stix_header

print stix_package.to_xml(include_namespaces=False)
```

Which outputs:

```
<stix:STIX_Package id="example:Package-1" version="1.1.1" timestamp="2014-08-12T18:03:44.240457+00:00">
  <stix:STIX_Header>
    <stix:Description>Getting Started!</stix:Description>
  </stix:STIX_Header>
</stix:STIX_Package>
```

2.3.2 ID Namespaces

By default, **python-stix** sets the default ID namespace to `http://example.com` with an alias of `example`. This results in STIX id declarations that look like `id="example:Package-2813128d-f45e-41f7-b10a-20a5656e3785"`.

To change this, use the `stix.utils.set_id_namespace()` method which takes a dictionary as a parameter.

```
from stix.core import STIXPackage
from stix.utils import set_id_namespace

NAMESPACE = {"http://MY-NAMESPACE.com" : "myNS"}
set_id_namespace(NAMESPACE) # new ids will be prefixed by "myNS"
```

```
stix_package = STIXPackage() # id will be created automatically
print stix_package.to_xml()
```

Which outputs:

```
<stix:STIX_Package
  xmlns:myNS="http://MY-NAMESPACE.com"
  xmlns:stixCommon="http://stix.mitre.org/common-1"
  xmlns:stixVocabs="http://stix.mitre.org/default_vocabularies-1"
  xmlns:stix="http://stix.mitre.org/stix-1"
  xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
  xsi:schemaLocation="
    http://stix.mitre.org/common-1 http://stix.mitre.org/XMLSchema/common/1.1.1/stix_common.xsd
    http://stix.mitre.org/default_vocabularies-1 http://stix.mitre.org/XMLSchema/default_vocabularies-1.1.1/default_vocabularies-1.xsd
    http://stix.mitre.org/stix-1 http://stix.mitre.org/XMLSchema/core/1.1.1/stix_core.xsd"
  id="myNS:Package-b2039368-9476-4a5b-8c1d-0ef5d1b37e06" version="1.1.1" timestamp="2014-08-12T18:00:00Z">
```

Success! The `xmlns:myNS="http://MY-NAMESPACE.com"` matches our NAMESPACE dictionary and the `id` attribute includes the `myNS` namespace alias.

Working With CybOX

If you are creating CybOX entities such as Observables, you'll want to set the ID namespace for `python-cybox` as well.

Note that **python-stix** and `python-cybox` treat namespaces slightly differently (for now anyway). Where **python-stix** uses Python dictionaries, `python-cybox` uses the `cybox.utils.Namespace` class to represent a namespace.

```
from cybox.utils import set_id_namespace, Namespace
from cybox.core import Observable
```

```
NAMESPACE = Namespace("http://MY-NAMESPACE.com", "myNS")
set_id_namespace(NAMESPACE)
```

```
obs = Observable()
print obs.to_xml()
```

Which outputs:

```
<cybox:ObservableType
  xmlns:myNS="http://MY-NAMESPACE.com"
  xmlns:cybox="http://cybox.mitre.org/cybox-2"
  xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
  xsi:schemaLocation="http://cybox.mitre.org/cybox-2 http://cybox.mitre.org/XMLSchema/core/2.1/cybox-core.xsd"
  id="myNS:Observable-7e6191d3-25e9-4283-a80c-867e175224ae">
```

Success (again)! The `xmlns:myNS="http://MY-NAMESPACE.com"` matches our `Namespace` object and the `id` attribute includes the `myNS` namespace alias.

2.3.3 Controlled Vocabularies: VocabString

Many fields in STIX leverage the `stixCommon:ControlledVocabularyStringType`, which acts as a base type for controlled vocabulary implementations. The STIX language defines a set of default controlled vocabularies which are found in the `stix_default_vocabs.xsd` XML Schema file.

The **python-stix** library contains a `stix.common.vocabs` module, which defines the `VocabString` class implementation of the schema `ControlledVocabularyStringType` as well as `VocabString` implementations which correspond to default controlled vocabularies.

For example, the `stix_default_vocabularies.xsd` schema defines a controlled vocabulary for STIX Package Intents: `PackageIntentVocab-1.0`. The `stix.common.vocabs` module contains an analogous `PackageIntent` class, which acts as a derivation of `VocabString`.

Each `VocabString` implementation contains:

- A static list of class-level term attributes, each beginning with `TERM_` (e.g., `TERM_INDICATORS`)
- A tuple containing all allowed vocabulary terms: `ALLOWED_VALUES`, which is used for input validation
- Methods found on `stix.Entity`, such as `to_xml()`, `to_dict()`, `from_dict()`, etc.

Interacting With VocabString Fields

The following sections define ways of interacting with `VocabString` fields.

Default Vocabulary Terms

The STIX Language often suggested a default controlled vocabulary type for a given controlled vocabulary field. Each controlled vocabulary contains an enumeration of allowed terms.

Each `VocabString` implementation found in the `stix.common.vocabs` module contains static class-level attributes for each vocabulary term. When setting controlled vocabulary field values, it is recommended that users take advantage of these class-level attributes.

The following demonstrates setting the `Package_Intent` field with a default vocabulary term. Note that the `STIXHeader.package_intents` property returns a list. As such, we use the `append()` method to add terms. Other STIX controlled vocabulary fields may only allow one value rather than a list of values.

```
from stix.core import STIXHeader
from stix.common.vocabs import PackageIntent

header = STIXHeader()
header.package_intents.append(PackageIntent.TERM_INDICATORS)

print header.to_xml(include_namespaces=False)
```

Which outputs:

```
<stix:STIXHeaderType>
  <stix:Package_Intent xsi:type="stixVocabs:PackageIntentVocab-1.0">Indicators</stix:Package_Intent>
</stix:STIXHeaderType>
```

Non-Default Vocabulary Terms

Though it is suggested, STIX content authors are not required to use the default controlled vocabulary for a given field. As such, **python-stix** allows users to pass in non-default values for controlled vocabulary fields.

To set a controlled vocabulary to a non-default vocabulary term, pass a `VocabString` instance into a controlled vocabulary field.

A raw `VocabString` field will contain no `xsi:type` information or `ALLOWED_VALUES` members, which removes the input and schema validation requirements.

```

from stix.core import STIXHeader
from stix.common.vocabs import VocabString, PackageIntent

header = STIXHeader()
non_default_term = VocabString("NON-DEFAULT VOCABULARY TERM")
header.package_intents.append(non_default_term)

print header.to_xml(include_namespaces=False)

```

Which outputs:

```

<stix:STIXHeaderType>
  <stix:Package_Intent>NON-DEFAULT VOCABULARY TERM</stix:Package_Intent>
</stix:STIXHeaderType>

```

Notice that the `<stix:Package_Intent>` field does not have an `xsi:type` attribute. As such, this field can contain any string value and is not bound by a controlled vocabulary enumeration of terms.

Working With Custom Controlled Vocabularies

STIX allows content authors and developers to extend the `ControlledVocabularyStringType` schema type for the definition of new controlled vocabularies. The **python-stix** library allows developers to create and register Python types which mirror the custom XML Schema vocabulary types.

XSD Example The following XML Schema example shows the definition of a new custom controlled vocabulary schema type. Instances of this schema type could be used wherever a `ControlledVocabularyStringType` instance is expected (e.g., the `STIX_Header/Package_Intent` field).

Filename: `customVocabs.xsd`

```

<xs:schema
  xmlns:xs="http://www.w3.org/2001/XMLSchema"
  xmlns:customVocabs="http://customvocabs.com/vocabs-1"
  xmlns:stixVocabs="http://stix.mitre.org/default_vocabularies-1"
  xmlns:stixCommon="http://stix.mitre.org/common-1"
  targetNamespace="http://customvocabs.com/vocabs-1"
  elementFormDefault="qualified"
  version="1.1.1"
  xml:lang="English">
  <xs:import namespace="http://stix.mitre.org/common-1" schemaLocation="http://stix.mitre.org/XMLSchema.xsd"/>
  <xs:complexType name="CustomVocab-1.0">
    <xs:simpleContent>
      <xs:restriction base="stixCommon:ControlledVocabularyStringType">
        <xs:simpleType>
          <xs:union memberTypes="customVocabs:CustomEnum-1.0"/>
        </xs:simpleType>
        <xs:attribute name="vocab_name" type="xs:string" use="optional" fixed="Test Vocab"/>
        <xs:attribute name="vocab_reference" type="xs:anyURI" use="optional" fixed="http://example.com/vocab-reference"/>
      </xs:restriction>
    </xs:simpleContent>
  </xs:complexType>
  <xs:simpleType name="CustomEnum-1.0">
    <xs:restriction base="xs:string">
      <xs:enumeration value="FOO"/>
      <xs:enumeration value="BAR"/>
    </xs:restriction>
  </xs:simpleType>
</xs:schema>

```

```
</xs:simpleType>
</xs:schema>
```

XML Instance Sample The following STIX XML instance document shows a potential use of this field. Note the `xsi:type=customVocabs:CustomVocab-1.0` on the `Package_Intent` field.

Filename: customVocabs.xml

```
<stix:STIX_Package
  xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
  xmlns:stixExample="http://stix.mitre.org/example"
  xmlns:stix="http://stix.mitre.org/stix-1"
  xmlns:customVocabs="http://customvocabs.com/vocabs-1"
  xsi:schemaLocation="
    http://stix.mitre.org/stix-1 /path/to/stix_core.xsd
    http://customvocabs.com/vocabs-1 /path/to/customVocabs.xsd"
  id="stixExample:STIXPackage-33fe3b22-0201-47cf-85d0-97c02164528d"
  timestamp="2014-05-08T09:00:00.000000Z"
  version="1.1.1">
  <stix:STIX_Header>
    <stix:Package_Intent xsi:type="customVocabs:CustomVocab-1.0">FOO</stix:Package_Intent>
  </stix:STIX_Header>
</stix:STIX_Package>
```

Python Code To parse content which uses custom controlled vocabularies, Python developers don't have to do anything special—you just call `STIXPackage.from_xml()` on the input and all the namespaces, `xsi:types`, etc. are attached to each instance of `VocabString`. When serializing the document, the input namespaces and `xsi:type` attributes are retained!

However, to *create* new content which utilizes a schema defined and enforced custom controlled vocabulary, developers must create a `VocabString` implementation which mirrors the schema definition.

For our `CustomVocab-1.0` schema type, the Python would look like this:

```
from stix.common import vocabs

# Create a custom vocabulary type
class CustomVocab(vocabs.VocabString):
    _namespace = 'http://customvocabs.com/vocabs-1'
    _XSI_TYPE = 'customVocabs:CustomVocab-1.0'
    _ALLOWED_VALUES = ('FOO', 'BAR')

# Register the type as a VocabString
vocabs.add_vocab(CustomVocab)
```

As you can see, we can express a lot of the same information found in the XML Schema definition, just with a lot less typing!

- `_namespace`: The `targetNamespace` for our custom vocabulary
- `_XSI_TYPE`: The `xsi:type` attribute value to write out for instances of this vocabulary.
- `_ALLOWED_VALUES`: A tuple of allowable values for this vocabulary.

Note: The call to `add_vocab()` registers the class and its `xsi:type` as a `VocabString` implementation so **python-stix** will know to build instances of `CustomVocab` when parsed content contains `CustomVocab-1.0` content. You must call `add_vocab()` to register your class prior to parsing content if you want the parser to build instances of your custom vocabulary class!

```
# builtin
from StringIO import StringIO

# python-stix modules
from stix.core import STIXPackage
from stix.common import vocabs

XML = \
"""
<stix:STIX_Package
  xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
  xmlns:stix="http://stix.mitre.org/stix-1"
  xmlns:customVocabs="http://customvocabs.com/vocabs-1"
  xmlns:example="http://example.com/"
  xsi:schemaLocation="
    http://stix.mitre.org/stix-1 /path/to/stix_core.xsd
    http://customvocabs.com/vocabs-1 /path/to/customVocabs.xsd"
  id="example:STIXPackage-33fe3b22-0201-47cf-85d0-97c02164528d"
  timestamp="2014-05-08T09:00:00.000000Z"
  version="1.1.1">
  <stix:STIX_Header>
    <stix:Package_Intent xsi:type="customVocabs:CustomVocab-1.0">FOO</stix:Package_Intent>
  </stix:STIX_Header>
</stix:STIX_Package>
"""

# Create a VocabString class for our CustomVocab-1.0 vocabulary which
class CustomVocab(vocabs.VocabString):
    _namespace = 'http://customvocabs.com/vocabs-1'
    _XSI_TYPE = 'customVocabs:CustomVocab-1.0'
    _ALLOWED_VALUES = ('FOO', 'BAR')

# Register our Custom Vocabulary class so parsing builds instances of
# CustomVocab
vocabs.add_vocab(CustomVocab)

# Parse the input document
sio = StringIO(XML)
package = STIXPackage.from_xml(sio)

# Retrieve the first (and only) Package_Intent entry
package_intent = package.stix_header.package_intents[0]

# Print information about the input Package_Intent
print type(package_intent), package_intent.xsi_type, package_intent

# Add another Package Intent
bar = CustomVocab('BAR')
package.stix_header.add_package_intent(bar)

# This will include the 'BAR' CustomVocab entry
print package.to_xml()
```

Version: 1.1.1.7

2.4 APIs or bindings?

This page describes both the **APIs** and the **bindings** provided by the *python-stix* library.

2.4.1 Overview

The *python-stix* library provides APIs and utilities that aid in the creation, consumption, and processing of Structured Threat Information eXpression (STIX) content. The APIs that drive much of the functionality of *python-stix* sit on top of a binding layer that acts as a direct connection between Python and the STIX XML. Because both the APIs and the bindings allow for the creation and development of STIX content, developers that are new to *python-stix* may not understand the differences between the two. This document aims to identify the purpose and uses of the APIs and bindings.

2.4.2 Bindings

The *python-stix* library leverages machine generated XML-to-Python bindings for the creation and processing of STIX content. These bindings are created using the `generateDS` utility and can be found under `stix.bindings` within the package hierarchy.

The STIX bindings allow for a direct, complete mapping between Python classes and STIX XML Schema data structures. That being said, it is possible (though not advised) to use only the STIX bindings to create STIX documents. However, because the code is generated from XML Schema without contextual knowledge of relationships or broader organizational/developmental schemes, it is often a cumbersome and laborious task to create even the simplest of STIX documents.

Developers within the *python-stix* team felt that the binding code did not lend itself to rapid development or natural navigation of data, and so it was decided that a higher-level API should be created.

2.4.3 APIs

The *python-stix* APIs are classes and utilities that leverage the STIX bindings for the creation and processing of STIX content. The APIs are designed to behave more naturally when working with STIX content, allowing developers to conceptualize and interact with STIX documents as pure Python objects and not XML Schema objects.

The APIs provide validation of inputs, multiple input and output formats, more Pythonic access of data structure internals and interaction with classes, and better interpretation of a developers intent through datatype coercion and implicit instantiation.

Note: The *python-stix* APIs are under constant development. Our goal is to provide full API coverage of the STIX data structures, but not all structures are exposed via the APIs yet. Please refer to the [API Reference](#) for API coverage details.

2.4.4 Brevity Wins

The two code examples show the difference in creating and printing a simple STIX document consisting of only a STIX Package and a STIX Header with a description and produced time using the *python-stix* and *python-cybox* bindings. Both examples will produce the same STIX XML!

API Example

```
from datetime import datetime
from stix.core import STIXPackage, STIXHeader
from stix.common import InformationSource
from cybox.common import Time

# Create the STIX Package and STIX Header objects
stix_package = STIXPackage()
stix_header = STIXHeader()

# Set the description
stix_header.description = 'APIs vs. Bindings Wiki Example'

# Set the produced time to now
stix_header.information_source = InformationSource()
stix_header.information_source.time = Time()
stix_header.information_source.time.produced_time = datetime.now()

# Build document
stix_package.stix_header = stix_header

# Print the document to stdout
print(stix_package.to_xml())
```

Binding Example

```
import sys
from datetime import datetime

import stix.bindings.stix_core as stix_core_binding
import stix.bindings.stix_common as stix_common_binding
import cybox.bindings.cybox_common as cybox_common_binding

# Create the STIX Package and STIX Header objects
stix_package = stix_core_binding.STIXType()
stix_header = stix_core_binding.STIXHeaderType()

# Set the description
stix_header_description = stix_common_binding.StructuredTextType()
stix_header_description.set_valueOf_('APIs vs. Bindings Wiki Example')

# Set the produced time to now
stix_header_time = cybox_common_binding.TimeType()
stix_header_time.set_Produced_Time(datetime.now())

# Bind the time to the STIX Header's Information Source element
stix_header_info_source = stix_common_binding.InformationSourceType()
stix_header_info_source.set_Time(stix_header_time)

# Build the document
stix_header.set_Description(stix_header_description)
stix_header.set_Information_Source(stix_header_info_source)
stix_package.set_STIX_Header(stix_header)

# Print the document to stdout
stix_package.export(sys.stdout, 0, stix_core_binding.DEFAULT_XML_NS_MAP)
```

2.4.5 Feedback

If there is a problem with the APIs or bindings, or if there is functionality missing from the APIs that forces the use of the bindings, let us know in the [python-stix issue tracker](#)

API Reference

Version: 1.1.1.7

3.1 API Reference

The *python-stix* APIs are the recommended tools for reading, writing, and manipulating STIX XML documents.

Note: The *python-stix* APIs are currently under development. As such, API coverage of STIX data constructs is incomplete; please bear with us as we work toward complete coverage. This documentation also serves to outline current API coverage.

3.1.1 STIX

Modules located in the base `stix` package

Version: 1.1.1.7

`stix.base` Module

Classes

class `stix.base.Entity`

Base class for all classes in the STIX API.

classmethod `dict_from_object` (*entity_obj*)

Convert from object representation to dict representation.

find (*id_*)

Searches the children of a `Entity` implementation for an object with an `id_` property that matches *id_*.

classmethod `from_dict` (*d*, *return_obj=None*)

Convert from dict representation to object representation. This should be overridden by a subclass

classmethod `from_json` (*json_doc*)

Parses the JSON document *json_doc* and returns a STIX `Entity` implementation instance.

Parameters `json_doc` – Input JSON representation of a STIX entity. This can be a readable object or a JSON string.

Returns *An implementation of* – `class::Entity` (e.g., `STIXPackage`).

classmethod `from_obj (obj, return_obj=None)`

Create an object from a binding object

classmethod `object_from_dict (entity_dict)`

Convert from dict representation to object representation.

to_dict ()

Converts a STIX `Entity` implementation into a Python dictionary. This may be overridden by derived classes.

to_obj (*return_obj=None, ns_info=None*)

Converts an `Entity` into a binding object.

Note: This needs to be overridden by derived classes.

to_xml (*include_namespaces=True, include_schemalocs=False, ns_dict=None, schemaloc_dict=None, pretty=True, auto_namespace=True, encoding='utf-8'*)

Serializes a `Entity` instance to an XML string.

The default character encoding is `utf-8` and can be set via the *encoding* parameter. If *encoding* is `None`, a unicode string is returned.

Parameters

- **auto_namespace** – Automatically discover and export XML namespaces for a STIX `Entity` instance.
- **include_namespaces** – Export namespace definitions in the output XML. Default is `True`.
- **include_schemalocs** – Export `xsi:schemaLocation` attribute in the output document. This will attempt to associate namespaces declared in the STIX document with schema locations. If a namespace cannot be resolved to a `schemaLocation`, a Python warning will be raised. Schemalocations will only be exported if *include_namespaces* is also `True`.
- **ns_dict** – Dictionary of XML definitions (namespace is key, alias is value) to include in the exported document. This must be passed in if *auto_namespace* is `False`.
- **schemaloc_dict** – Dictionary of XML namespace: schema location mappings to include in the exported document. These will only be included if *auto_namespace* is `False`.
- **pretty** – Pretty-print the XML.
- **encoding** – The output character encoding. Default is `utf-8`. If *encoding* is set to `None`, a unicode string is returned.

Returns An XML string for this `Entity` instance. Default character encoding is `utf-8`.

class `stix.base.EntityList (*args)`

Bases: `_abcoll.MutableSequence`, `stix.base.Entity`

Version: 1.1.1.7

stix.data_marking Module

Classes

```
class stix.data_marking.Marking (markings=None)
    Bases: stix.base.Entity

class stix.data_marking.MarkingSpecification (controlled_structure=None, marking_structures=None)
    Bases: stix.base.Entity

class stix.data_marking.MarkingStructure
    Bases: stix.base.Entity
```

Functions

```
stix.data_marking.add_extension (cls)
```

Constants

```
stix.data_marking._EXTENSION_MAP = {}
    dict() -> new empty dictionary dict(mapping) -> new dictionary initialized from a mapping object's
    (key, value) pairs

dict(iterable) -> new dictionary initialized as if via: d = { } for k, v in iterable:
    d[k] = v

dict(**kwargs) -> new dictionary initialized with the name=value pairs in the keyword argument list. For
    example: dict(one=1, two=2)
```

3.1.2 STIX Campaign

Modules located in the `stix.campaign` package

Version: 1.1.1.7

stix.campaign Module

Classes

```
class stix.campaign.Campaign (id_=None, idref=None, timestamp=None, title=None, description=None, short_description=None)
    Bases: stix.base.BaseCoreComponent

class stix.campaign.AssociatedCampaigns (scope=None, *args)
    Bases: stix.common.related.GenericRelationshipList

class stix.campaign.Attribution (scope=None, *args)
    Bases: stix.common.related.GenericRelationshipList

class stix.campaign.Names (*args)
    Bases: stix.base.EntityList
```

```
class stix.campaign.RelatedIncidents (scope=None, *args)
    Bases: stix.common.related.GenericRelationshipList

class stix.campaign.RelatedIndicators (scope=None, *args)
    Bases: stix.common.related.GenericRelationshipList

class stix.campaign.RelatedTTPs (scope=None, *args)
    Bases: stix.common.related.GenericRelationshipList
```

3.1.3 STIX Common

Modules located in the `stix.common` package

Version: 1.1.1.7

`stix.common` Module

Classes

```
class stix.common.EncodedCDATA (value=None, encoded=None)
    Bases: stix.base.Entity
```

Version: 1.1.1.7

`stix.common.activity` Module

Classes

```
class stix.common.activity.Activity
    Bases: stix.base.Entity
```

Version: 1.1.1.7

`stix.common.confidence` Module

Classes

```
class stix.common.confidence.Confidence (value=None, timestamp=None, description=None,
                                           source=None)
    Bases: stix.base.Entity
```

Version: 1.1.1.7

`stix.common.datetimewithprecision` Module

Classes

```
class stix.common.datetimewithprecision.DateTimeWithPrecision (value=None, precision='second')
    Bases: stix.base.Entity
```

Constants

`stix.common.datetimewithprecision.DATE_PRECISION_VALUES = ('year', 'month', 'day')`
tuple() -> empty tuple tuple(iterable) -> tuple initialized from iterable's items

If the argument is a tuple, the return value is the same object.

`stix.common.datetimewithprecision.TIME_PRECISION_VALUES = ('hour', 'minute', 'second')`
tuple() -> empty tuple tuple(iterable) -> tuple initialized from iterable's items

If the argument is a tuple, the return value is the same object.

`stix.common.datetimewithprecision.DATETIME_PRECISION_VALUES = ('year', 'month', 'day', 'hour', 'minute', 'second')`
tuple() -> empty tuple tuple(iterable) -> tuple initialized from iterable's items

If the argument is a tuple, the return value is the same object.

Version: 1.1.1.7

stix.common.identity Module

Classes

class `stix.common.identity.Identity` (*id_=None, idref=None, name=None, related_identities=None*)
Bases: `stix.base.Entity`

class `stix.common.identity.RelatedIdentities` (*args)
Bases: `stix.base.EntityList`

Functions

`stix.common.identity.add_extension(cls)`

Constants

`stix.common.identity._EXTENSION_MAP = {}`
dict() -> new empty dictionary dict(mapping) -> new dictionary initialized from a mapping object's (key, value) pairs

dict(iterable) -> new dictionary initialized as if via: `d = {}` for `k, v` in iterable:

`d[k] = v`

dict(kwargs)** -> new dictionary initialized with the name=value pairs in the keyword argument list. For example: `dict(one=1, two=2)`

Version: 1.1.1.7

stix.common.information_source Module

Classes

```
class stix.common.information_source.InformationSource (description=None,      iden-
                                                         tity=None,      time=None,
                                                         tools=None,      contribut-
                                                         ing_sources=None,      refer-
                                                         ences=None)
```

Bases: `stix.base.Entity`

```
class stix.common.information_source.ContributingSources (*args)
```

Bases: `stix.base.EntityList`

Version: 1.1.1.7

stix.common.kill_chains Module

Classes

```
class stix.common.kill_chains.KillChain (id_=None,  name=None,  definer=None,  refer-
                                                         ence=None)
```

Bases: `stix.base.Entity`

```
class stix.common.kill_chains.KillChains (*args)
```

Bases: `stix.base.EntityList`

```
class stix.common.kill_chains.KillChainPhase (phase_id=None,  name=None,  ordinal-
                                                         ity=None)
```

Bases: `stix.base.Entity`

```
class stix.common.kill_chains.KillChainPhaseReference (phase_id=None,  name=None,
                                                         ordinality=None,
                                                         kill_chain_id=None,
                                                         kill_chain_name=None)
```

Bases: `stix.common.kill_chains.KillChainPhase`

```
class stix.common.kill_chains.KillChainPhasesReference (*args)
```

Bases: `stix.base.EntityList`

Lockheed Martin Kill Chain

There is a shortcuts for adding kill chain phases from the [Lockheed Martin Cyber Kill Chain](#) to indicators:

```
from stix.common.kill_chains.lmco import PHASE_RECONNAISSANCE
from stix.indicator import Indicator
i = Indicator()
i.add_kill_chain_phase(PHASE_RECONNAISSANCE)
print i.to_xml(include_namespaces=False)
```

```
<indicator:Indicator id="example:indicator-2bb1c0ea-7dd8-40fb-af64-7199f00719c1"
    timestamp="2015-03-17T19:14:22.797675+00:00" xsi:type='indicator:IndicatorType'>
  <indicator:Kill_Chain_Phases>
    <stixCommon:Kill_Chain_Phase phase_id="stix:TPP-af1016d6-a744-4ed7-ac91-00fe2272185a"/>
  </indicator:Kill_Chain_Phases>
</indicator:Indicator>
```

Version: 1.1.1.7

stix.common.related Module

Classes

```
class stix.common.related.GenericRelationship (confidence=None, information_source=None, relationship=None)
    Bases: stix.base.Entity
```

```
class stix.common.related.GenericRelationshipList (scope=None, *args)
    Bases: stix.base.EntityList
```

```
class stix.common.related.RelatedPackageRef (**kwargs)
    Bases: stix.common.related.GenericRelationship
```

```
class stix.common.related.RelatedPackageRefs (*args)
    Bases: stix.base.EntityList
```

```
class stix.common.related._BaseRelated (item=None, confidence=None, information_source=None, relationship=None)
    Bases: stix.common.related.GenericRelationship
```

A base class for related types.

This class is not a real STIX type and should not be directly instantiated.

```
class stix.common.related.RelatedCampaign (item=None, confidence=None, information_source=None, relationship=None)
    Bases: stix.common.related._BaseRelated
```

```
class stix.common.related.RelatedCOA (item=None, confidence=None, information_source=None, relationship=None)
    Bases: stix.common.related._BaseRelated
```

```
class stix.common.related.RelatedExploitTarget (item=None, confidence=None, information_source=None, relationship=None)
    Bases: stix.common.related._BaseRelated
```

```
class stix.common.related.RelatedIdentity (item=None, confidence=None, information_source=None, relationship=None)
    Bases: stix.common.related._BaseRelated
```

```
class stix.common.related.RelatedIncident (item=None, confidence=None, information_source=None, relationship=None)
    Bases: stix.common.related._BaseRelated
```

```
class stix.common.related.RelatedIndicator (item=None, confidence=None, information_source=None, relationship=None)
    Bases: stix.common.related._BaseRelated
```

```
class stix.common.related.RelatedObservable (item=None, confidence=None, information_source=None, relationship=None)
    Bases: stix.common.related._BaseRelated
```

```
class stix.common.related.RelatedThreatActor (item=None, confidence=None, information_source=None, relationship=None)
    Bases: stix.common.related._BaseRelated
```

```
class stix.common.related.RelatedTTP (item=None, confidence=None, information_source=None, relationship=None)
    Bases: stix.common.related._BaseRelated
```

Version: 1.1.1.7

stix.common.statement Module

Classes

```
class stix.common.statement.Statement (value=None,      timestamp=None,  description=None,
                                         source=None)
```

Bases: `stix.base.Entity`

Version: 1.1.1.7

stix.common.structured_text Module

Classes

```
class stix.common.structured_text.StructuredText (value=None)
```

Bases: `stix.base.Entity`

Version: 1.1.1.7

stix.common.tools Module

Classes

```
class stix.common.tools.ToolInformation (title=None,          short_description=None,
                                           tool_name=None, tool_vendor=None)
```

Bases: `stix.base.Entity`, `cybox.common.tools.ToolInformation`

Version: 1.1.1.7

stix.common.vocabs Module

Classes

```
class stix.common.vocabs.VocabString (value=None)
```

Bases: `stix.base.Entity`

```
    is_plain()
```

Whether the VocabString can be represented as a single value.

```
class stix.common.vocabs.AssetType (value=None)
```

Bases: `stix.common.vocabs.VocabString`

```
class stix.common.vocabs.AttackerInfrastructureType (value=None)
```

Bases: `stix.common.vocabs.VocabString`

```
class stix.common.vocabs.AttackerToolType (value=None)
```

Bases: `stix.common.vocabs.VocabString`

```
class stix.common.vocabs.AvailabilityLossType (value=None)
```

Bases: `stix.common.vocabs.VocabString`

```
class stix.common.vocabs.CampaignStatus (value=None)
```

Bases: `stix.common.vocabs.VocabString`

```
class stix.common.vocabs.COASTage(value=None)
    Bases: stix.common.vocabs.VocabString

class stix.common.vocabs.CourseOfActionType(value=None)
    Bases: stix.common.vocabs.VocabString

class stix.common.vocabs.DiscoveryMethod(value=None)
    Bases: stix.common.vocabs.VocabString

class stix.common.vocabs.HighMediumLow(value=None)
    Bases: stix.common.vocabs.VocabString

class stix.common.vocabs.ImpactQualification(value=None)
    Bases: stix.common.vocabs.VocabString

class stix.common.vocabs.ImpactRating(value=None)
    Bases: stix.common.vocabs.VocabString

class stix.common.vocabs.IncidentCategory(value=None)
    Bases: stix.common.vocabs.VocabString

class stix.common.vocabs.IncidentEffect(value=None)
    Bases: stix.common.vocabs.VocabString

class stix.common.vocabs.IncidentStatus(value=None)
    Bases: stix.common.vocabs.VocabString

class stix.common.vocabs.IndicatorType(value=None)
    Bases: stix.common.vocabs.VocabString

class stix.common.vocabs.InformationSourceRole(value=None)
    Bases: stix.common.vocabs.VocabString

class stix.common.vocabs.InformationType(value=None)
    Bases: stix.common.vocabs.VocabString

class stix.common.vocabs.IntendedEffect(value=None)
    Bases: stix.common.vocabs.VocabString

class stix.common.vocabs.LocationClass(value=None)
    Bases: stix.common.vocabs.VocabString

class stix.common.vocabs.LossDuration(value=None)
    Bases: stix.common.vocabs.VocabString

class stix.common.vocabs.LossProperty(value=None)
    Bases: stix.common.vocabs.VocabString

class stix.common.vocabs.MalwareType(value=None)
    Bases: stix.common.vocabs.VocabString

class stix.common.vocabs.ManagementClass(value=None)
    Bases: stix.common.vocabs.VocabString

class stix.common.vocabs.Motivation(value=None)
    Bases: stix.common.vocabs.VocabString

class stix.common.vocabs.OwnershipClass(value=None)
    Bases: stix.common.vocabs.VocabString

class stix.common.vocabs.PackageIntent(value=None)
    Bases: stix.common.vocabs.VocabString
```

```
class stix.common.vocabs.PlanningAndOperationalSupport (value=None)
    Bases: stix.common.vocabs.VocabString

class stix.common.vocabs.SecurityCompromise (value=None)
    Bases: stix.common.vocabs.VocabString

class stix.common.vocabs.SystemType (value=None)
    Bases: stix.common.vocabs.VocabString

class stix.common.vocabs.ThreatActorSophistication (value=None)
    Bases: stix.common.vocabs.VocabString

class stix.common.vocabs.ThreatActorType (value=None)
    Bases: stix.common.vocabs.VocabString
```

Functions

```
stix.common.vocabs.add_vocab(cls)
    Registers a VocabString subclass.
```

Note: The `register_vocab()` class decorator has replaced this method.

Constants

```
stix.common.vocabs._VOCAB_MAP = {'stixVocabs:LocationClassVocab-1.0': <class 'stix.common.vocabs.LocationClass'>
    dict() -> new empty dictionary dict(mapping) -> new dictionary initialized from a mapping object's
        (key, value) pairs

    dict(iterable) -> new dictionary initialized as if via: d = {} for k, v in iterable:
        d[k] = v

    dict(**kwargs) -> new dictionary initialized with the name=value pairs in the keyword argument list. For
        example: dict(one=1, two=2)
```

3.1.4 STIX Core

Modules located in the `stix.core` package

Version: 1.1.1.7

`stix.core.stix_header` Module

Classes

```
class stix.core.stix_header.STIXHeader (package_intents=None, description=None, handling=None,
    information_source=None, title=None, short_description=None)

    Bases: stix.base.Entity

    add_profile(profile)
        Adds a profile to the STIX Header. A Profile is represented by a string URI.
```

short_description

The short_description property for this entity.

Default Value: None

Note: If set to a value that is not an instance of `stix.common.structured_text.StructuredText`, an attempt to will be made to convert the value into an instance of `stix.common.structured_text.StructuredText`.

Returns An instance of `stix.common.structured_text.StructuredText`

Version: 1.1.1.7

stix.core.stix_package Module**Classes**

```
class stix.core.stix_package.STIXPackage (id=None, idref=None, timestamp=None,
                                          stix_header=None, courses_of_action=None,
                                          exploit_targets=None, indicators=None, observ-
                                          ables=None, incidents=None, threat_actors=None,
                                          ttps=None, campaigns=None)
```

Bases: `stix.base.Entity`

add(entity)

Adds *entity* to a top-level collection. For example, if *entity* is an Indicator object, the *entity* will be added to the indicators top-level collection.

classmethod from_xml(xml_file, encoding=None)

Parses the *xml_file* file-like object and returns a `STIXPackage` instance.

Parameters

- **xml_file** – A file, file-like object, `etree._Element`, or `etree._ElementTree` instance.
- **encoding** – The character encoding of the *xml_file* input. If `None`, an attempt will be made to determine the input character encoding. Default is `None`.

Returns An instance of – class:`STIXPackage`.

```
class stix.core.stix_package.RelatedPackages (scope=None, *args)
```

Bases: `stix.common.related.GenericRelationshipList`

Version: 1.1.1.7

stix.core.ttps Module**Classes**

```
class stix.core.ttps.TTPs (ttps=None)
```

Bases: `stix.base.EntityList`

3.1.5 STIX Course of Action (COA)

Modules located in the `stix.coa` package

Version: 1.1.1.7

`stix.coa` Module

Classes

```
class stix.coa.CourseOfAction(id_=None, idref=None, timestamp=None, title=None, description=None, short_description=None)
    Bases: stix.base.BaseCoreComponent
```

```
class stix.coa.RelatedCOAs(scope=None, *args)
    Bases: stix.common.related.GenericRelationshipList
```

Version: 1.1.1.7

`stix.coa.objective` Module

Classes

```
class stix.coa.objective.Objective(description=None, short_description=None)
    Bases: stix.base.Entity
```

3.1.6 STIX Exploit Target

Modules located in the `stix.exploit_target` package

Version: 1.1.1.7

`stix.exploit_target` Module

Overview

The `stix.exploit_target` module implements `ExploitTarget`. This denotes the specific vulnerability, weakness, or software configuration that creates a security risk.

Documentation Resources

- [ExploitTarget Data Model](#)
- [ExploitTarget Idioms](#)

Classes

```
class stix.exploit_target.ExploitTarget(id_=None, idref=None, timestamp=None, title=None, description=None, short_description=None)
    Bases: stix.base.BaseCoreComponent
    Implementation of STIX ExploitTarget.
```

Parameters

- **id_** (*optional*) – An identifier. If `None`, a value will be generated via `stix.utils.create_id()`. If set, this will unset the `idref` property.
- **idref** (*optional*) – An identifier reference. If set this will unset the `id_` property.
- **title** (*optional*) – A string title.
- **timestamp** (*optional*) – A timestamp value. Can be an instance of `datetime.datetime` or `str`.
- **description** (*optional*) – A string description.
- **short_description** (*optional*) – A string short description.

add_configuration (*v*)

Adds a configuration to the `configurations` list property.

Note: If `None` is passed in no value is added

Parameters *v* – A configuration value.

Raises: `ValueError` if the *v* param is of type `stix.exploit_target.configuration`

add_vulnerability (*v*)

Adds a vulnerability to the `vulnerabilities` list property.

Note: If `None` is passed in no value is added

Parameters *v* – A Vulnerability value.

Raises: `ValueError` if the *v* param is of type `stix.exploit_target.vulnerability`

add_weakness (*v*)

Adds a weakness to the `weaknesses` list property.

Note: If `None` is passed in no value is added

Parameters *v* – A weakness value.

Raises: `ValueError` if the *v* param is of type `stix.exploit_target.weakness`

configuration

A list of `Configuration` objects

Default Value: `None`

Returns A list of `stix.exploit_target.configuration`

Raises `ValueError` – If set to a value that is not `None` and not an instance of `stix.exploit_target.configuration`

vulnerabilities

A list of `Vulnerability` objects

Default Value: `None`

Returns A list of `stix.exploit_target.vulnerability`

Raises `ValueError` – If set to a value that is not `None` and not an instance of `stix.exploit_target.vulnerability`

weaknesses

A list of `Weakness` objects

Default Value: `None`

Returns A list of `stix.exploit_target.weakness`

Raises `ValueError` – If set to a value that is not `None` and not an instance of `stix.exploit_target.weakness`

class `stix.exploit_target.PotentialCOAs` (*coas=None, scope=None*)

Bases: `stix.common.related.GenericRelationshipList`

A list of `Potential_COA` objects, defaults to empty array

class `stix.exploit_target.RelatedExploitTargets` (*related_exploit_targets=None, scope=None*)

Bases: `stix.common.related.GenericRelationshipList`

A list of `RelatedExploitTargets` objects, defaults to empty array

Version: 1.1.1.7

stix.exploit_target.configuration Module

Overview

The `stix.exploit_target.configuration` module captures the software configuration that causes a vulnerability in a system.

Classes

class `stix.exploit_target.configuration.Configuration` (*description=None, short_description=None, cce_id=None*)

Bases: `stix.base.Entity`

Implementation of STIX Configuration.

Parameters

- **cce_id** (*optional*) – Common Configuration Enumeration value as a string
- **description** (*optional*) – A string description.
- **short_description** (*optional*) – A string short description.

cce_id

Common Configuration Enumeration value for this `Configuration`.

Default Value: `None`

Returns A string representing the CCE ID

description

The description property for this `Configuration`.

Default Value: `None`

Note: If set to a value that is not an instance of `stix.common.structured_text.StructuredText`, an attempt to will be made to convert the value into an instance of `stix.common.structured_text.StructuredText`.

Returns An instance of `stix.common.structured_text.StructuredText`

Version: 1.1.1.7

`stix.exploit_target.vulnerability` Module

Overview

The `stix.exploit_target.vulnerability` module captures the software version and specific bug that causes an exploitable condition.

Classes

class `stix.exploit_target.vulnerability.Vulnerability` (*title=None, description=None, short_description=None*)

Bases: `stix.base.Entity`

Implementation of STIX Vulnerability.

Parameters

- **title** (*optional*) – A string title.
- **description** (*optional*) – A string description.
- **short_description** (*optional*) – A string short description.

description

The description property for this `Vulnerability`.

Default Value: None

Note: If set to a value that is not an instance of `stix.common.structured_text.StructuredText`, an attempt to will be made to convert the value into an instance of `stix.common.structured_text.StructuredText`.

Returns An instance of `stix.common.structured_text.StructuredText`

discovered_datetime

Returns The time this vulnerability was discovered, represented as `class:DateTimeWithPrecision`

short_description

The short_description property for this `Vulnerability`.

Default Value: None

Note: If set to a value that is not an instance of `stix.common.structured_text.StructuredText`, an attempt to will be made to convert the value into an instance of `stix.common.structured_text.StructuredText`.

Returns An instance of `stix.common.structured_text.StructuredText`

title

String representing the Vulnerability Title

class `stix.exploit_target.vulnerability.CVSSVector`

Bases: `stix.base.Entity`

Common Vulnerability Scoring System object, representing its component measures

class `stix.exploit_target.vulnerability.AffectedSoftware` (*scope=None, *args*)

Bases: `stix.common.related.GenericRelationshipList`

Version: 1.1.1.7

`stix.exploit_target.weakness` Module

Overview

The `stix.exploit_target.weakness` module captures a given software weakness as enumerated by CWE

Classes

class `stix.exploit_target.weakness.Weakness` (*description=None, cwe_id=None*)

Bases: `stix.base.Entity`

Implementation of STIX Weakness.

Parameters

- **cwe_id** (*optional*) – Common Weakness Enumeration value as a string
- **description** (*optional*) – A string description.

cwe_id

Common Weakness Enumeration value as a string

description

The description property for this `Weakness`.

Default Value: None

Note: If set to a value that is not an instance of `stix.common.structured_text.StructuredText`, an attempt to will be made to convert the value into an instance of `stix.common.structured_text.StructuredText`.

Returns An instance of `stix.common.structured_text.StructuredText`

3.1.7 STIX Extensions

Modules located in the `stix.extensions` package

Version: 1.1.1.7

stix.extensions.identity.ciq_identity_3_0 Module**Classes**

class stix.extensions.identity.ciq_identity_3_0.**CIQIdentity3_0Instance** (*roles=None, specification=None*)

Bases: stix.common.identity.Identity

class stix.extensions.identity.ciq_identity_3_0.**STIXCIQIdentity3_0** (*party_name=None, languages=None, addresses=None, organization_info=None, electronic_address_identifiers=None, free_text_lines=None, contact_numbers=None, nationalities=None*)

Bases: stix.base.Entity

class stix.extensions.identity.ciq_identity_3_0.**Address** (*free_text_address=None, country=None, administrative_area=None*)

Bases: stix.base.Entity

class stix.extensions.identity.ciq_identity_3_0.**AdministrativeArea** (*name_elements=None*)

Bases: stix.base.Entity

class stix.extensions.identity.ciq_identity_3_0.**_BaseNameElement** (*value=None*)

Bases: stix.base.Entity

Do not instantiate directly: use PersonNameElement or OrganisationNameElement

class stix.extensions.identity.ciq_identity_3_0.**ContactNumber** (*contact_number_elements=None, communication_media_type=None*)

Bases: stix.base.Entity

class stix.extensions.identity.ciq_identity_3_0.**ContactNumberElement** (*value=None, type_=None*)

Bases: stix.base.Entity

class stix.extensions.identity.ciq_identity_3_0.**Country** (*name_elements=None*)

Bases: stix.base.Entity

class stix.extensions.identity.ciq_identity_3_0.**ElectronicAddressIdentifier** (*value=None, type_=None*)

Bases: stix.base.Entity

class stix.extensions.identity.ciq_identity_3_0.**FreeTextAddress** (*address_lines=None*)

Bases: stix.base.Entity

class stix.extensions.identity.ciq_identity_3_0.**FreeTextLine** (*value=None, type_=None*)

Bases: stix.base.Entity

```
class stix.extensions.identity.ciq_identity_3_0.Language (value=None)
    Bases: stix.base.Entity

class stix.extensions.identity.ciq_identity_3_0.NameElement (value=None,
                                                             name_type=None,
                                                             name_code=None,
                                                             name_code_type=None)
    Bases: stix.base.Entity

    Bases: stix.base.Entity

class stix.extensions.identity.ciq_identity_3_0.OrganisationName (name_elements=None,
                                                                  subdivi-
                                                                  sion_names=None,
                                                                  type_=None)
    Bases: stix.base.Entity

class stix.extensions.identity.ciq_identity_3_0.OrganisationNameElement (value=None,
                                                                           ele-
                                                                           ment_type=None)
    Bases: stix.extensions.identity.ciq_identity_3_0._BaseNameElement

class stix.extensions.identity.ciq_identity_3_0.PartyName (name_lines=None, per-
                                                           son_names=None, organi-
                                                           sation_names=None)
    Bases: stix.base.Entity

class stix.extensions.identity.ciq_identity_3_0.PersonName (name_elements=None)
    Bases: stix.base.Entity

class stix.extensions.identity.ciq_identity_3_0.PersonNameElement (value=None,
                                                                      ele-
                                                                      ment_type=None)
    Bases: stix.extensions.identity.ciq_identity_3_0._BaseNameElement

class stix.extensions.identity.ciq_identity_3_0.SubDivisionName (value=None,
                                                                  type_=None)
    Bases: stix.base.Entity
```

Constants

```
stix.extensions.identity.ciq_identity_3_0.XML_NS_XPIL = 'urn:oasis:names:tc:ciq:xpil:3'
str(object='') -> string
```

Return a nice string representation of the object. If the argument is a string, the return value is the same object.

```
stix.extensions.identity.ciq_identity_3_0.XML_NS_XNL = 'urn:oasis:names:tc:ciq:xnl:3'
str(object='') -> string
```

Return a nice string representation of the object. If the argument is a string, the return value is the same object.

```
stix.extensions.identity.ciq_identity_3_0.XML_NS_XAL = 'urn:oasis:names:tc:ciq:xal:3'
str(object='') -> string
```

Return a nice string representation of the object. If the argument is a string, the return value is the same object.

```
stix.extensions.identity.ciq_identity_3_0.XML_NS_STIX_EXT = 'http://stix.mitre.org/extensions/Identity#CIQ'
str(object='') -> string
```

Return a nice string representation of the object. If the argument is a string, the return value is the same object.

Version: 1.1.1.7

`stix.extensions.malware.maec_4_1_malware` Module

Classes

```
class stix.extensions.malware.maec_4_1_malware.MAECInstance (maec=None)
    Bases: stix.ttp.malware_instance.MalwareInstance
```

Version: 1.1.1.7

`stix.extensions.marking.simple_marking` Module

Classes

```
class stix.extensions.marking.simple_marking.SimpleMarkingStructure (statement=None)
    Bases: stix.data_marking.MarkingStructure
```

Version: 1.1.1.7

`stix.extensions.marking.terms_of_use_marking` Module

Classes

```
class stix.extensions.marking.terms_of_use_marking.TermsOfUseMarkingStructure (terms_of_use=None)
    Bases: stix.data_marking.MarkingStructure
```

Version: 1.1.1.7

`stix.extensions.marking.tlp` Module

Classes

```
class stix.extensions.marking.tlp.TLPMarkingStructure (color=None)
    Bases: stix.data_marking.MarkingStructure
```

Version: 1.1.1.7

`stix.extensions.test_mechanism.generic_test_mechanism` Module

Classes

```
class stix.extensions.test_mechanism.generic_test_mechanism.GenericTestMechanism (id_=None,
                                                                                     idref=None)
    Bases: stix.indicator.test_mechanism._BaseTestMechanism
```

Version: 1.1.1.7

`stix.extensions.test_mechanism.open_ioc_2010_test_mechanism` Module

Classes

class `stix.extensions.test_mechanism.open_ioc_2010_test_mechanism.OpenIOCTestMechanism` (*id_=None, idref=None*)

Bases: `stix.indicator.test_mechanism._BaseTestMechanism`

Version: 1.1.1.7

`stix.extensions.test_mechanism.snort_test_mechanism` Module

Classes

class `stix.extensions.test_mechanism.snort_test_mechanism.SnortTestMechanism` (*id_=None, idref=None*)

Bases: `stix.indicator.test_mechanism._BaseTestMechanism`

Version: 1.1.1.7

`stix.extensions.test_mechanism.yara_test_mechanism` Module

Classes

class `stix.extensions.test_mechanism.yara_test_mechanism.YaraTestMechanism` (*id_=None, idref=None*)

Bases: `stix.indicator.test_mechanism._BaseTestMechanism`

3.1.8 STIX Incident

Modules located in the `stix.incident` package

Version: 1.1.1.7

`stix.incident` Module

Classes

class `stix.incident.Incident` (*id_=None, idref=None, timestamp=None, title=None, description=None, short_description=None*)

Bases: `stix.base.BaseCoreComponent`

add_related_indicator (*value*)

Adds an Related Indicator to the `related_indicators` list property of this `Incident`.

The *indicator* parameter must be an instance of `RelatedIndicator` or `Indicator`.

If the *indicator* parameter is `None`, no item will be added to the `related_indicators` list property.

Calling this method is the same as calling `append()` on the `related_indicators` property.

See also:

The `RelatedIndicators` documentation.

Note: If the *indicator* parameter is not an instance of `RelatedIndicator` an attempt will be made to convert it to one.

Parameters *indicator* – An instance of `Indicator` or `RelatedIndicator`.

Raises `ValueError` – If the *indicator* parameter cannot be converted into an instance of `RelatedIndicator`

add_related_observable (*value*)

Adds a Related Observable to the `related_observables` list property of this `Incident`.

The *observable* parameter must be an instance of `RelatedObservable` or `Observable`.

If the *observable* parameter is `None`, no item will be added to the `related_observables` list property.

Calling this method is the same as calling `append()` on the `related_observables` property.

See also:

The `RelatedObservables` documentation.

Note: If the *observable* parameter is not an instance of `RelatedObservable` an attempt will be made to convert it to one.

Parameters *observable* – An instance of `Observable` or `RelatedObservable`.

Raises `ValueError` – If the *value* parameter cannot be converted into an instance of `RelatedObservable`

```
class stix.incident.AttributedThreatActors (scope=None, *args)
    Bases: stix.common.related.GenericRelationshipList
```

```
class stix.incident.LeveragedTTPs (scope=None, *args)
    Bases: stix.common.related.GenericRelationshipList
```

```
class stix.incident.RelatedIndicators (scope=None, *args)
    Bases: stix.common.related.GenericRelationshipList
```

```
class stix.incident.RelatedObservables (scope=None, *args)
    Bases: stix.common.related.GenericRelationshipList
```

```
class stix.incident.RelatedIncidents (scope=None, *args)
    Bases: stix.common.related.GenericRelationshipList
```

Version: 1.1.1.7

stix.incident.affected_asset Module

Classes

```
class stix.incident.affected_asset.AffectedAsset
    Bases: stix.base.Entity
```

```
class stix.incident.affected_asset.AssetType (value=None, count_affected=None)
    Bases: stix.common.vocabs.VocabString
```

```
is_plain()
    Override VocabString.is_plain()
```

Version: 1.1.1.7

stix.incident.coa Module

Classes

class stix.incident.coa.**COATaken** (*course_of_action=None*)
Bases: stix.base.Entity

class stix.incident.coa.**COATime** (*start=None, end=None*)
Bases: stix.base.Entity

Version: 1.1.1.7

stix.incident.contributors Module

Classes

class stix.incident.contributors.**Contributors** (**args*)
Bases: stix.base.EntityList

Version: 1.1.1.7

stix.incident.direct_impact_summary Module

Classes

class stix.incident.direct_impact_summary.**DirectImpactSummary**
Bases: stix.base.Entity

Version: 1.1.1.7

stix.incident.external_id Module

Classes

class stix.incident.external_id.**ExternalID** (*value=None, source=None*)
Bases: stix.base.Entity

Version: 1.1.1.7

stix.incident.history Module

Classes

class stix.incident.history.**History** (**args*)
Bases: stix.base.EntityList

class stix.incident.history.**HistoryItem**
Bases: stix.base.Entity

```
class stix.incident.history.JournalEntry (value=None)
    Bases: stix.base.Entity
```

Version: 1.1.1.7

`stix.incident.impact_assessment` Module

Classes

```
class stix.incident.impact_assessment.ImpactAssessment
    Bases: stix.base.Entity
```

Version: 1.1.1.7

`stix.incident.indirect_impact_summary` Module

Classes

```
class stix.incident.indirect_impact_summary.IndirectImpactSummary
    Bases: stix.base.Entity
```

Version: 1.1.1.7

`stix.incident.loss_estimation` Module

Classes

```
class stix.incident.loss_estimation.LossEstimation
    Bases: stix.base.Entity
```

Version: 1.1.1.7

`stix.incident.property_affected` Module

Classes

```
class stix.incident.property_affected.PropertyAffected
    Bases: stix.base.Entity
```

```
class stix.incident.property_affected.NonPublicDataCompromised (value=None,
                                                                    data_encrypted=None)
    Bases: stix.common.vocabs.VocabString
```

Version: 1.1.1.7

stix.incident.time Module

Classes

```
class stix.incident.time.Time (first_malicious_action=None,          initial_compromise=None,
                              first_data_exfiltration=None,        incident_discovery=None,
                              incident_opened=None,                containment_achieved=None,
                              restoration_achieved=None,            incident_reported=None,    inci-
                              dent_closed=None)

Bases: stix.base.Entity
```

Version: 1.1.1.7

stix.incident.total_loss_estimation Module

Classes

```
class stix.incident.total_loss_estimation.TotalLossEstimation
Bases: stix.base.Entity
```

3.1.9 STIX Indicator

Modules located in the `stix.indicator` package

Version: 1.1.1.7

stix.indicator.indicator Module

Overview

The `stix.indicator.indicator` module implements `IndicatorType` STIX Language construct. The `IndicatorType` characterizes a cyber threat indicator made up of a pattern identifying certain observable conditions as well as contextual information about the patterns meaning, how and when it should be acted on, etc.

Documentation Resources

- [Indicator Data Model](#)
- [Indicator Idioms](#)

Classes

```
class stix.indicator.indicator.Indicator (id_=None,                idref=None,                times-
                                          tamp=None,                title=None,                description=None,
                                          short_description=None)

Bases: stix.base.BaseCoreComponent

Implementation of the STIX IndicatorType.
```

Parameters

- **id_** (*optional*) – An identifier. If `None`, a value will be generated via `stix.utils.create_id()`. If set, this will unset the `idref` property.

- **idref** (*optional*) – An identifier reference. If set this will unset the `id_` property.
- **title** (*optional*) – A string title.
- **timestamp** (*optional*) – A timestamp value. Can be an instance of `datetime.datetime` or `str`.
- **description** (*optional*) – A string description.
- **short_description** (*optional*) – A string short description.

add_alternative_id (*value*)

Adds an alternative id to the `alternative_id` list property.

Note: If `None` is passed in no value is added to the `alternative_id` list property.

Parameters *value* – An identifier value.

add_indicated_ttp (*v*)

Adds an Indicated TTP to the `indicated_ttps` list property of this `Indicator`.

The *v* parameter must be an instance of `stix.common.related.RelatedTTP` or `stix.ttp.TTP`.

If the *v* parameter is `None`, no item will be added to the `indicated_ttps` list property.

Note: If the *v* parameter is not an instance of `stix.common.related.RelatedTTP` an attempt will be made to convert it to one.

Parameters *v* – An instance of `stix.common.related.RelatedTTP` or `stix.ttp.TTP`.

Raises `ValueError` – If the *v* parameter cannot be converted into an instance of `stix.common.related.RelatedTTP`

add_indicator_type (*value*)

Adds a value to the `indicator_types` list property.

The *value* parameter can be a `str` or an instance of `stix.common.vocabs.VocabString`.

Note: If the *value* parameter is a `str` instance, an attempt will be made to convert it into an instance of `stix.common.vocabs.IndicatorType`

Parameters *value* – An instance of `stix.common.vocabs.VocabString` or `str`.

Raises `ValueError` – If the *value* param is a `str` instance that cannot be converted into an instance of `stix.common.vocabs.IndicatorType`.

add_kill_chain_phase (*value*)

Add a new Kill Chain Phase reference to this `Indicator`.

Parameters *value* – a `stix.common.kill_chains.KillChainPhase` or a *str* representing the `phase_id` of. Note that you if you are defining a custom Kill Chain, you need to add it to the STIX package separately.

add_object (*object_*)

Adds a python-cybox `Object` instance to the `observables` list property.

This is the same as calling `indicator.add_observable(object_)`.

Note: If the *object* param is not an instance of `cybox.core.Object` an attempt will be made to convert it into one before wrapping it in an `cybox.core.Observable` layer.

Parameters *object_* – An instance of `cybox.core.Object` or an object that can be converted into an instance of `cybox.core.Observable`

Raises `ValueError` – if the *object_* param cannot be converted to an instance of `cybox.core.Observable`.

add_observable (*observable*)

Adds an observable to the `observables` list property of the `Indicator`.

If the *observable* parameter is `None`, no item will be added to the `observables` list.

Note: The STIX Language dictates that an `Indicator` can have only one `Observable` under it. Because of this, the `to_xml()` method will convert the `observables` list into an `cybox.core.ObservableComposition` instance, in which each item in the `observables` list will be added to the composition. By default, the `operator` of the composition layer will be set to "OR". The `operator` value can be changed via the `observable_composition_operator` property.

Parameters *observable* – An instance of `cybox.core.Observable` or an object type that can be converted into one.

Raises `ValueError` – If the *observable* param cannot be converted into an instance of `cybox.core.Observable`.

add_related_indicator (*indicator*)

Adds an Related Indicator to the `related_indicators` list property of this `Indicator`.

The *indicator* parameter must be an instance of `stix.common.related.RelatedIndicator` or `Indicator`.

If the *indicator* parameter is `None`, no item will be added to the `related_indicators` list property.

Calling this method is the same as calling `append()` on the `related_indicators` proeprty.

See also:

The `RelatedIndicators` documentation.

Note: If the *tm* parameter is not an instance of `stix.common.related.RelatedIndicator` an attempt will be made to convert it to one.

Parameters *indicator* – An instance of `Indicator` or `stix.common.related.RelatedIndicator`.

Raises `ValueError` – If the *indicator* parameter cannot be converted into an instance of `stix.common.related.RelatedIndicator`

add_test_mechanism (*tm*)

Adds an Test Mechanism to the `test_mechanisms` list property of this `Indicator`.

The *tm* parameter must be an instance of a `stix.indicator.test_mechanism._BaseTestMechanism` implementation.

If the *tm* parameter is `None`, no item will be added to the `test_mechanisms` list property.

See also:

Test Mechanism implementations are found under the `stix.extensions.test_mechanism` package.

Parameters `tm` – An instance of a `stix.indicator.test_mechanism._BaseTestMechanism` implementation.

Raises `ValueError` – If the `tm` parameter is not an instance of `stix.indicator.test_mechanism._BaseTestMechanism`

add_valid_time_position (*value*)

Adds an valid time position to the `valid_time_positions` property list.

If *value* is `None`, no item is added to the `valid_time_positions` list.

Parameters *value* – An instance of `stix.indicator.valid_time.ValidTime`.

Raises `ValueError` – If the *value* argument is not an instance of `stix.indicator.valid_time.ValidTime`.

alternative_id

An alternative identifier for this `Indicator`

This property can be set to a single string identifier or a list of identifiers. If set to a single object, the object will be inserted into an empty list internally.

Default Value: Empty list

Returns A list of alternative ids.

confidence

The confidence for this `Indicator`.

This property can be set to an instance of `str`, `stix.common.vocabs.VocabString`, or `stix.common.confidence.Confidence`.

Default Value: `None`

Note: If set to an instance of `str` or `stix.common.vocabs.VocabString`, that value will be wrapped in an instance of `stix.common.confidence.Confidence`.

Returns An instance of `stix.common.confidence.Confidence`.

Raises `ValueError` – If set to a `str` value that cannot be converted into an instance of `stix.common.confidence.Confidence`.

get_produced_time ()

Gets the produced time for this `Indicator`.

This is the same as calling `produced_time = indicator.producer.time.produced_time`.

Returns `None` or an instance of `cybox.common.DateTimeWithPrecision`.

get_received_time ()

Gets the received time for this `Indicator`.

This is the same as calling `received_time = indicator.producer.time.received_time`.

Returns `None` or an instance of `cybox.common.DateTimeWithPrecision`.

indicator_types

A list of indicator types for this `Indicator`.

This property can be set to lists or single instances of `str` or `stix.common.vocabs.VocabString` or an instance of `IndicatorTypes`.

Note: If an instance of `str` is passed in (or a list containing `str` values) an attempt will be made to convert that string value to an instance of `stix.common.vocabs.IndicatorType`.

Default Value: An empty `IndicatorTypes` instance.

See also:

Documentation for `IndicatorTypes`.

Returns An instance of `IndicatorTypes`.

observable

A convenience property for accessing or setting the only `cybox.core.Observable` instance held by this `Indicator`.

Default Value: Empty list.

Setting this property results in the `observables` property being reinitialized to an empty list and appending the input value, resulting in a list containing one value.

Note: If the `observables` list contains more than one item, this property will only return the first item in the list.

Returns An instance of `cybox.core.Observable`.

Raises `ValueError` – If set to a value that cannot be converted to an instance of `cybox.core.Observable`.

observables

A list of `cybox.core.Observable` instances. This can be set to a single object instance or a list of objects.

Note: If the input value or values are not instance(s) of `cybox.core.Observable`, an attempt will be made to convert the value to an instance of `cybox.core.Observable`.

Default Value: Empty list

Returns A list of `cybox.core.Observable` instances.

Raises `ValueError` – If set to a value that cannot be converted to an instance of `cybox.core.Observable`.

producer

Contains information about the source of the `Indicator`.

Default Value: None

Returns An instance of `stix.common.information_source.InformationSource`

Raises `ValueError` – If set to a value that is not None and not an instance of `stix.common.information_source.InformationSource`

set_produced_time (*produced_time*)

Sets the `produced_time` property of the producer property instance fo *produced_time*.

This is the same as calling `indicator.producer.time.produced_time = produced_time`.

The *produced_time* parameter must be an instance of `str`, `datetime.datetime`, or `cybox.common.DateTimeWithPrecision`.

Note: If *produced_time* is a `str` or `datetime.datetime` instance an attempt will be made to convert it into an instance of `cybox.common.DateTimeWithPrecision`.

Parameters produced_time – An instance of `str`, `datetime.datetime`, or `cybox.common.DateTimeWithPrecision`.

set_producer_identity (*identity*)

Sets the name of the producer of this indicator.

This is the same as calling `indicator.producer.identity.name = identity`.

If the producer property is `None`, it will be initialized to an instance of `stix.common.information_source.InformationSource`.

If the *identity* property of the producer instance is `None`, it will be initialized to an instance of `stix.common.identity.Identity`.

Note: if the *identity* parameter is not an instance `stix.common.identity.Identity` an attempt will be made to convert it to one.

Parameters identity – An instance of `str` or `stix.common.identity.Identity`.

set_received_time (*received_time*)

Sets the received time for this `Indicator`.

This is the same as calling `indicator.producer.time.produced_time = produced_time`.

The *received_time* parameter must be an instance of `str`, `datetime.datetime`, or `cybox.common.DateTimeWithPrecision`.

Parameters received_time – An instance of `str`, `datetime.datetime`, or `cybox.common.DateTimeWithPrecision`.

Note: If *received_time* is a `str` or `datetime.datetime` instance an attempt will be made to convert it into an instance of `cybox.common.DateTimeWithPrecision`.

valid_time_positions

A list of valid time positions for this `Indicator`.

This property can be set to a single instance or a list of `stix.indicator.valid_time.ValidTime` instances. If set to a single instance, that object is converted into a list containing one item.

Default Value: Empty list

Returns A list of `stix.indicator.valid_time.ValidTime` instances.

class `stix.indicator.indicator.CompositeIndicatorExpression` (*operator='OR', *args*)
Bases: `stix.base.EntityList`

Implementation of the STIX `CompositeIndicatorExpressionType`.

The `CompositeIndicatorExpression` class implements methods found on `collections.MutableSequence` and as such can be interacted with as a list (e.g., `append()`).

Note: The `append()` method can only accept instances of `Indicator`.

Examples

Add a `Indicator` instance to an instance of `CompositeIndicatorExpression`:

```
>>> i = Indicator()
>>> comp = CompositeIndicatorExpression()
>>> comp.append(i)
```

Create a `CompositeIndicatorExpression` from a list of `Indicator` instances using `*args` argument list:

```
>>> list_indicators = [Indicator() for i in xrange(10)]
>>> comp = CompositeIndicatorExpression(CompositeIndicatorExpression.OP_OR, *list_indicators)
>>> len(comp)
10
```

Parameters

- **operator** (*str, optional*) – The logical composition operator. Must be "AND" or "OR".
- ***args** – Variable length argument list of `Indicator` instances.

OP_AND `str`
String "AND"

OP_OR `str`
String "OR"

OPERATORS `tuple`
Tuple of allowed operator values.

operator `str`
The logical composition operator. Must be "AND" or "OR".

class `stix.indicator.indicator.RelatedIndicators` (*related_indicators=None, scope=None*)
Bases: `stix.common.related.GenericRelationshipList`

The `RelatedIndicators` class provides functionality for adding `stix.common.related.RelatedIndicator` instances to an `Indicator` instance.

The `RelatedIndicators` class implements methods found on `collections.MutableSequence` and as such can be interacted with as a list (e.g., `append()`).

The `append()` method can accept instances of `stix.common.related.RelatedIndicator` or `Indicator` as an argument.

Note: Calling `append()` with an instance of `stix.coa.CourseOfAction` will wrap that instance in a `stix.common.related.RelatedIndicator` layer, with `item` set to the `Indicator` instance.

Examples

Append an instance of `Indicator` to the `Indicator.related_indicators` property. The instance of `Indicator` will be wrapped in an instance of `stix.common.related.RelatedIndicator`:

```
>>> related = Indicator()
>>> parent_indicator = Indicator()
>>> parent_indicator.related_indicators.append(related)
>>> print type(indicator.related_indicators[0])
<class 'stix.common.related.RelatedIndicator'>
```

Iterate over the `related_indicators` property of an `Indicator` instance and print the ids of each underlying `Indicator` instance:

```
>>> for related in indicator.related_indicators:
>>>     print related.item.id_
```

Parameters

- **related_indicators** (*list, optional*) – A list of `Indicator` or `stix.common.related.RelatedIndicator` instances.
- **scope** (*str, optional*) – The scope of the items. Can be set to "inclusive" or "exclusive". See `stix.common.related.GenericRelationshipList` documentation for more information.

scope str

The scope of the items. Can be set to "inclusive" or "exclusive". See `stix.common.related.GenericRelationshipList` documentation for more information.

class `stix.indicator.indicator.SuggestedCOAs` (*suggested_coas=None, scope=None*)

Bases: `stix.common.related.GenericRelationshipList`

The `SuggestedCOAs` class provides functionality for adding `stix.common.related.RelatedCOA` instances to an `Indicator` instance.

The `SuggestedCOAs` class implements methods found on `collections.MutableSequence` and as such can be interacted with as a list (e.g., `append()`).

The `append()` method can accept instances of `stix.common.related.RelatedCOA` or `stix.coa.CourseOfAction` as an argument.

Note: Calling `append()` with an instance of `stix.coa.CourseOfAction` will wrap that instance in a `stix.common.related.RelatedCOA` layer, with the `item` set to the `stix.coa.CourseOfAction` instance.

Examples

Append an instance of `stix.coa.CourseOfAction` to the `Indicator.suggested_coas` property. The instance of `stix.coa.CourseOfAction` will be wrapped in an instance of `stix.common.related.RelatedCOA`.

```
>>> coa = CourseOfAction()
>>> indicator = Indicator()
>>> indicator.suggested_coas.append(coa)
>>> print type(indicator.suggested_coas[0])
<class 'stix.common.related.RelatedCOA'>
```

Iterate over the `suggested_coas` property of an `Indicator` instance and print the ids of each underlying `stix.coa.CourseOfAction` instance.

```
>>> for related_coa in indicator.suggested_coas:
>>>     print related_coa.item.id_
```

Parameters

- **suggested_coas** (*list*) – A list of `stix.coa.CourseOfAction` or `stix.common.related.RelatedCOA` instances.
- **scope** (*str*) – The scope of the items. Can be set to "inclusive" or "exclusive". See `stix.common.related.GenericRelationshipList` documentation for more information.

scope str

The scope of the items. Can be set to "inclusive" or "exclusive". See `stix.common.related.GenericRelationshipList` documentation for more information.

class `stix.indicator.indicator.IndicatorTypes` (*args)

Bases: `stix.base.TypedList`

A `stix.common.vocabs.VocabString` collection which defaults to `stix.common.vocabs.IndicatorType`. This class implements methods found on `collections.MutableSequence` and as such can be interacted with like a list.

Note: The `append()` method can accept `str` or `stix.common.vocabs.VocabString` instances. If a `str` instance is passed in, an attempt will be made to convert it to an instance of `stix.common.vocabs.IndicatorType`.

Examples

Add an instance of `stix.common.vocabs.IndicatorType`:

```
>>> from stix.common.vocabs import IndicatorType
>>> itypes = IndicatorTypes()
>>> type_ = IndicatorType(IndicatorType.TERM_IP_WATCHLIST)
>>> itypes.append(type_)
>>> print len(itypes)
1
```

Add a string value:

```
>>> from stix.common.vocabs import IndicatorType
>>> itypes = IndicatorTypes()
>>> type_(IndicatorType.TERM_IP_WATCHLIST)
<type 'str'>
>>> itypes.append(IndicatorType.TERM_IP_WATCHLIST)
>>> print len(itypes)
1
```

Parameters *args – Variable length argument list of strings or `stix.common.vocabs.VocabString` instances.

Version: 1.1.1.7

stix.indicator.sightings Module

Classes

class stix.indicator.sightings.**Sighting** (*timestamp=None, timestamp_precision=None, description=None*)

Bases: stix.base.Entity

class stix.indicator.sightings.**Sightings** (*sightings_count=None, *args*)

Bases: stix.base.EntityList

class stix.indicator.sightings.**RelatedObservables** (*scope=None, *args*)

Bases: stix.common.related.GenericRelationshipList

Version: 1.1.1.7

stix.indicator.test_mechanism Module

Classes

class stix.indicator.test_mechanism.**_BaseTestMechanism** (*id_=None, idref=None*)

Bases: stix.base.Entity

Functions

stix.indicator.test_mechanism.**add_extension** (*cls*)

Constants

stix.indicator.test_mechanism.**_EXTENSION_MAP** = {'genericTM:GenericTestMechanismType': <class 'stix.extension.GenericTestMechanismType'>
dict() -> new empty dictionary dict(mapping) -> new dictionary initialized from a mapping object's

(key, value) pairs

dict(iterable) -> new dictionary initialized as if via: d = { } for k, v in iterable:

d[k] = v

dict(kwargs)** -> new dictionary initialized with the name=value pairs in the keyword argument list. For example: dict(one=1, two=2)

Version: 1.1.1.7

stix.indicator.valid_time Module

Classes

class stix.indicator.valid_time.**ValidTime** (*start_time=None, end_time=None*)

Bases: stix.base.Entity

3.1.10 STIX Threat Actor

Modules located in the `stix.threat_actor` package

Version: 1.1.1.7

`stix.threat_actor` Module

Classes

```
class stix.threat_actor.ThreatActor (id_=None, idref=None, timestamp=None, title=None, de-  
                                     scription=None, short_description=None)
```

Bases: `stix.base.BaseCoreComponent`

```
class stix.threat_actor.AssociatedActors (scope=None, *args)
```

Bases: `stix.common.related.GenericRelationshipList`

```
class stix.threat_actor.AssociatedCampaigns (scope=None, *args)
```

Bases: `stix.common.related.GenericRelationshipList`

```
class stix.threat_actor.ObservedTTPs (scope=None, *args)
```

Bases: `stix.common.related.GenericRelationshipList`

3.1.11 STIX Tactics, Techniques, and Procedures (TTP)

Modules located in the `stix.ttp` package

Version: 1.1.1.7

`stix.ttp` Module

Classes

```
class stix.ttp.TTP (id_=None, idref=None, timestamp=None, title=None, description=None,  
                   short_description=None)
```

Bases: `stix.base.BaseCoreComponent`

Version: 1.1.1.7

`stix.ttp.attack_pattern` Module

Classes

```
class stix.ttp.attack_pattern.AttackPattern (id_=None, title=None, description=None,  
                                              short_description=None)
```

Bases: `stix.base.Entity`

Version: 1.1.1.7

stix.ttp.behavior Module

Classes

```
class stix.ttp.behavior.Behavior (malware_instances=None, attack_patterns=None, ex-  
                                ploits=None)
```

Bases: `stix.base.Entity`

Version: 1.1.1.7

stix.ttp.exploit Module

Classes

```
class stix.ttp.exploit.Exploit (id_=None, title=None, description=None,  
                                short_description=None)
```

Bases: `stix.base.Entity`

Version: 1.1.1.7

stix.ttp.exploit_targets Module

Classes

```
class stix.ttp.exploit_targets.ExploitTargets (scope=None, *args)
```

Bases: `stix.common.related.GenericRelationshipList`

Version: 1.1.1.7

stix.ttp.infrastructure Module

Classes

```
class stix.ttp.infrastructure.Infrastructure (id_=None, title=None, description=None,  
                                                short_description=None)
```

Bases: `stix.base.Entity`

Version: 1.1.1.7

stix.ttp.malware_instance Module

Classes

```
class stix.ttp.malware_instance.MalwareInstance (id_=None, title=None, description=None,  
                                                    short_description=None)
```

Bases: `stix.base.Entity`

Functions

```
stix.ttp.malware_instance.add_extension (cls)
```

Constants

`stix.ttp.malware_instance._EXTENSION_MAP = {'stix-maec:MAEC4.1InstanceType': <class 'stix.extensions.malware_instance.MAEC4.1InstanceType'>}`
`dict()` -> new empty dictionary
`dict(mapping)` -> new dictionary initialized from a mapping object's (key, value) pairs

`dict(iterable)` -> new dictionary initialized as if via: `d = {}` for `k, v` in `iterable`:

`d[k] = v`

`dict(**kwargs)` -> new dictionary initialized with the name=value pairs in the keyword argument list. For example: `dict(one=1, two=2)`

Version: 1.1.1.7

`stix.ttp.related_ttps` Module

Classes

`class stix.ttp.related_ttps.RelatedTTPs(scope=None, *args)`
Bases: `stix.common.related.GenericRelationshipList`

Version: 1.1.1.7

`stix.ttp.resource` Module

Classes

`class stix.ttp.resource.Resource(tools=None, infrastructure=None, personas=None)`
Bases: `stix.base.Entity`

Version: 1.1.1.7

`stix.ttp.victim_targeting` Module

Classes

`class stix.ttp.victim_targeting.VictimTargeting`
Bases: `stix.base.Entity`

3.1.12 STIX Utils

Modules located in the `stix.utils` package

Version: 1.1.1.7

stix.utils.dates Module

Functions

`stix.utils.dates.parse_value(value)`

Attempts to parse *value* into an instance of `datetime.datetime`. If *value* is `None`, this function will return `None`.

Parameters *value* – A timestamp. This can be a string or `datetime.datetime` value.

`stix.utils.dates.serialize_value(value)`

Attempts to convert *value* into an ISO8601-compliant timestamp string. If *value* is `None`, `None` will be returned.

Parameters *value* – A `datetime.datetime` value.

Returns An ISO8601 formatted timestamp string.

Version: 1.1.1.7

stix.utils.idgen Module

Classes

class `stix.utils.idgen.IDGenerator(namespace=None, method=1)`

Bases: `object`

Utility class for generating STIX ids

create_id (*prefix='guid'*)

Create an ID.

Note that if *prefix* is not provided, it will be *guid*, even if the *method* is *METHOD_INT*.

class `stix.utils.idgen.InvalidMethodError(method)`

Bases: `exceptions.ValueError`

Functions

`stix.utils.idgen._get_generator()`

Return the *stix.utils* module's generator object.

Only under rare circumstances should this function be called by external code. More likely, external code should initialize its own `IDGenerator` or use the *set_id_namespace*, *set_id_method*, or *create_id* functions of the *stix.utils* module.

`stix.utils.idgen.set_id_namespace(namespace)`

Set the namespace for the module-level ID Generator

`stix.utils.idgen.set_id_method(method)`

Set the method for the module-level ID Generator

`stix.utils.idgen.get_id_namespace()`

Return the namespace associated with generated ids

`stix.utils.idgen.get_id_namespace_alias()`

Returns the namespace alias associated with generated ids

`stix.utils.idgen.create_id(prefix=None)`
Create an ID using the module-level ID Generator

Constants

`stix.utils.idgen.__generator = None`

`stix.utils.idgen.EXAMPLE_NAMESPACE = {'http://example.com': 'example'}`
`dict()` -> new empty dictionary `dict(mapping)` -> new dictionary initialized from a mapping object's
(key, value) pairs

`dict(iterable)` -> new dictionary initialized as if via: `d = {}` for `k, v` in `iterable`:

`d[k] = v`

`dict(**kwargs)` -> new dictionary initialized with the name=value pairs in the keyword argument list. For example: `dict(one=1, two=2)`

Version: 1.1.1.7

`stix.utils.nsparser` Module

Classes

`class stix.utils.nsparser.NamespaceParser`
Bases: `object`

Constants

`stix.utils.nsparser.XML_NAMESPACES = {'http://www.w3.org/2000/09/xmldsig#': 'ds', 'http://www.w3.org/1999/xlink': 'xlink'}`
`dict()` -> new empty dictionary `dict(mapping)` -> new dictionary initialized from a mapping object's
(key, value) pairs

`dict(iterable)` -> new dictionary initialized as if via: `d = {}` for `k, v` in `iterable`:

`d[k] = v`

`dict(**kwargs)` -> new dictionary initialized with the name=value pairs in the keyword argument list. For example: `dict(one=1, two=2)`

`stix.utils.nsparser.STIX_NS_TO_SCHEMALOCATION = {'http://stix.mitre.org/extensions/StructuredCOA#Generic-1': 'StructuredCOA'}`
`dict()` -> new empty dictionary `dict(mapping)` -> new dictionary initialized from a mapping object's
(key, value) pairs

`dict(iterable)` -> new dictionary initialized as if via: `d = {}` for `k, v` in `iterable`:

`d[k] = v`

`dict(**kwargs)` -> new dictionary initialized with the name=value pairs in the keyword argument list. For example: `dict(one=1, two=2)`

`stix.utils.nsparser.EXT_NS_TO_SCHEMALOCATION = {'urn:oasis:names:tc:ciq:xpil:3': 'http://stix.mitre.org/XMLSchema'}`
`dict()` -> new empty dictionary `dict(mapping)` -> new dictionary initialized from a mapping object's

(key, value) pairs

dict(iterable) -> new dictionary initialized as if via: `d = { } for k, v in iterable:`

`d[k] = v`

dict(kwargs)** -> new dictionary initialized with the name=value pairs in the keyword argument list. For example: `dict(one=1, two=2)`

`stix.utils.nsparser.DEFAULT_STIX_NS_TO_PREFIX = {'http://stix.mitre.org/extensions/StructuredCOA#Generic-1': dict() -> new empty dictionary dict(mapping) -> new dictionary initialized from a mapping object's`

(key, value) pairs

dict(iterable) -> new dictionary initialized as if via: `d = { } for k, v in iterable:`

`d[k] = v`

dict(kwargs)** -> new dictionary initialized with the name=value pairs in the keyword argument list. For example: `dict(one=1, two=2)`

`stix.utils.nsparser.DEFAULT_EXT_TO_PREFIX = {'http://capec.mitre.org/capec-2': 'capec', 'http://schemas.mandiant.com/XMLSchema#STIX-1': dict() -> new empty dictionary dict(mapping) -> new dictionary initialized from a mapping object's`

(key, value) pairs

dict(iterable) -> new dictionary initialized as if via: `d = { } for k, v in iterable:`

`d[k] = v`

dict(kwargs)** -> new dictionary initialized with the name=value pairs in the keyword argument list. For example: `dict(one=1, two=2)`

Version: 1.1.1.7

stix.utils.parser Module

Classes

class `stix.utils.parser.UnsupportedVersionError` (*message, expected=None, found=None*)
Bases: `exceptions.Exception`

Raised when a parsed STIX document contains a version that is not supported by this version of python-stix.

class `stix.utils.parser.UnknownVersionError`
Bases: `exceptions.Exception`

Raised when a parsed STIX document contains no version information.

`stix.utils.parser.UnsupportedRootElement`
alias of `UnsupportedRootElementError`

class `stix.utils.parser.EntityParser`
Bases: `object`

parse_xml (*xml_file, check_version=True, check_root=True, encoding=None*)
Creates a python-stix STIXPackage object from the supplied xml_file.

Parameters

- **xml_file** – A filename/path or a file-like object representing a STIX instance document

- **check_version** – Inspect the version before parsing.
- **check_root** – Inspect the root element before parsing.
- **encoding** – The character encoding of the input *xml_file*. If `None`, an attempt will be made to determine the input character encoding.

Raises

- `UnknownVersionError` – If *check_version* is `True` and *xml_file* does not contain STIX version information.
- `UnsupportedVersionError` – If *check_version* is `False` and *xml_file* contains an unsupported STIX version.
- `UnsupportedRootElement` – If *check_root* is `True` and *xml_file* contains an invalid root element.

parse_xml_to_obj (*xml_file*, *check_version*=`True`, *check_root*=`True`, *encoding*=`None`)

Creates a STIX binding object from the supplied xml file.

Parameters

- **xml_file** – A filename/path or a file-like object representing a STIX instance document
- **check_version** – Inspect the version before parsing.
- **check_root** – Inspect the root element before parsing.
- **encoding** – The character encoding of the input *xml_file*.

Raises

- `UnknownVersionError` – If *check_version* is `True` and *xml_file* does not contain STIX version information.
- `UnsupportedVersionError` – If *check_version* is `False` and *xml_file* contains an unsupported STIX version.
- `UnsupportedRootElement` – If *check_root* is `True` and *xml_file* contains an invalid root element.

Version: 1.1.1.7

3.2 API Coverage

The *python-stix* APIs currently provide partial coverage of all STIX-defined constructs. Development is ongoing toward the goal of providing full STIX language support in the APIs. Until such time that full coverage is provided, an overview of which constructs are available in these APIs will be maintained below.

Note: Many STIX constructs can contain **Cybox** constructs. The **python-cybox** project provides its own APIs for interacting with the **Cybox** specification. Please see the [Cybox API Documentation](#) for information about Cybox API coverage.

3.2.1 STIX Core

STIX Construct	API Coverage	Documentation
STIX Package	Full	<code>stix.core.stix_package.STIXPackage</code>
STIX Header	Full	<code>stix.core.stix_header.STIXHeader</code>
Related Packages	Full	<code>stix.core.stix_package.RelatedPackages</code>

Contributing

If a bug is found, a feature is missing, or something just isn't behaving the way you'd expect it to, please submit an issue to our [tracker](#). If you'd like to contribute code to our repository, you can do so by issuing a [pull request](#) and we will work with you to try and integrate that code into our repository.
