**Version:** 1.1.1.8

The **python-stix** library provides an API for developing and consuming *Structured Threat Information eXpression (STIX)* content. Developers can leverage the API to develop applications that create, consume, translate, or otherwise process STIX content. This page should help new developers get started with using this library. For more information about STIX, please refer to the [STIX website](#).

---

**Note:** These docs provide standard reference for this Python library. For documentation on *idiomatic* usage and *common patterns*, as well as various STIX-related information and utilities, please visit the [STIXProject at GitHub](#).

---

### Versions

---

Each version of python-stix is designed to work with a single version of the STIX Language. The table below shows the latest version the library for each version of STIX.

STIX Version	python-stix Version
1.1.1	1.1.1.8 ( <a href="#">PyPI</a> ) ( <a href="#">GitHub</a> )
1.1.0	1.1.0.6 ( <a href="#">PyPI</a> ) ( <a href="#">GitHub</a> )
1.0.1	1.0.1.1 ( <a href="#">PyPI</a> ) ( <a href="#">GitHub</a> )
1.0	1.0.0a7 ( <a href="#">PyPI</a> ) ( <a href="#">GitHub</a> )

Users and developers working with multiple versions of STIX content may want to take a look at [stix-ramrod](#), which is a library designed to update STIX and CybOX content.

Check out the [Working with python-stix](#) section for examples on how to integrate **stix-ramrod** and **python-stix**.

## Contents

---

**Version:** 1.1.1.8

## Installation

The installation of python-stix can be accomplished through a few different workflows.

### Recommended Installation

Use [pypi](#) and pip:

```
$ pip install stix
```

You might also want to consider using a [virtualenv](#). Please refer to the [pip](#) installation instructions for details regarding the installation of pip.

### Dependencies

The python-stix library relies on some non-standard Python libraries for the processing of STIX content. Revisions of python-stix may depend on particular versions of dependencies to function correctly. These versions are detailed within the distutils setup.py installation script.

The following libraries are required to use python-stix:

- [lxml](#) - A Pythonic binding for the C libraries **libxml2** and **libxslt**.
- [python-cybox](#) - A library for consuming and producing CybOX content.
- [python-dateutil](#) - A library for parsing datetime information.

Each of these can be installed with [pip](#) or by manually downloading packages from PyPI. On Windows, you will probably have the most luck using [pre-compiled binaries](#) for [lxml](#). On Ubuntu (12.04 or 14.04), you should make sure the following packages are installed before attempting to compile [lxml](#) from source:

- libxml2-dev
- libxslt1-dev
- zlib1g-dev

**Warning:** Users have encountered errors with versions of libxml2 (a dependency of lxml) prior to version 2.9.1. The default version of libxml2 provided on Ubuntu 12.04 is currently 2.7.8. Users are encouraged to upgrade libxml2 manually if they have any issues. Ubuntu 14.04 provides libxml2 version 2.9.1.

## Manual Installation

If you are unable to use pip, you can also install python-stix with `setuptools`. If you don't already have setuptools installed, please install it before continuing.

1. Download and install the *dependencies* above. Although setuptools will generally install dependencies automatically, installing the dependencies manually beforehand helps distinguish errors in dependency installation from errors in stix installation. Make sure you check to ensure the versions you install are compatible with the version of stix you plan to install.
2. Download the desired version of stix from [PyPI](#) or the GitHub [releases](#) page. The steps below assume you are using the 1.1.1.8 release.
3. Extract the downloaded file. This will leave you with a directory named stix-1.1.1.8.

```
$ tar -zxf stix-1.1.1.8.tar.gz  
$ ls  
stix-1.1.1.8 stix-1.1.1.8.tar.gz
```

OR

```
$ unzip stix-1.1.1.8.zip  
$ ls  
stix-1.1.1.8 stix-1.1.1.8.zip
```

4. Run the installation script.

```
$ cd stix-1.1.1.8  
$ python setup.py install
```

5. Test the installation.

```
$ python  
Python 2.7.6 (default, Mar 22 2014, 22:59:56)  
[GCC 4.8.2] on linux2  
Type "help", "copyright", "credits" or "license" for more information.  
>>> import stix  
>>>
```

If you don't see an `ImportError`, the installation was successful.

## Further Information

If you're new to installing Python packages, you can learn more at the [Python Packaging User Guide](#), specifically the [Installing Python Packages](#) section.

**Version:** 1.1.1.8

## Getting Started

This page gives an introduction to `python-stix` and how to use it.

---

**Note:** This page is being actively worked on; feedback is always welcome.

---

## Prerequisites

The python-stix library provides an API for creating or processing STIX content. As such, it is a developer tool that can be leveraged by those who know Python 2.6/2.7 and are familiar with object-oriented programming practices, Python package layouts, and are comfortable with the installation of Python libraries. To contribute code to the python-stix repository, users must be familiar with [git](#) and [GitHub pull request](#) methodologies. Understanding XML, XML Schema, and the STIX language is also incredibly helpful when using python-stix in an application.

## Your First STIX Application

Once you have installed python-stix, you can begin writing Python applications that consume or create STIX content!

---

**Note:** The `python-stix` library provides **bindings** and **APIs**, both of which can be used to parse and write STIX XML files. For in-depth description of the *APIs, bindings, and the differences between the two*, please refer to [APIs](#) or [bindings](#)?

---

### Creating a STIX Package

```
from stix.core import STIXPackage, STIXHeader      # Import the STIX Package and STIX Header APIs

stix_package = STIXPackage()                      # Create an instance of STIXPackage
stix_header = STIXHeader()                         # Create an instance of STIXHeader
stix_header.description = "Getting Started!"       # Set the description
stix_package.stix_header = stix_header              # Link the STIX Head to our STIX Package

print(stix_package.to_xml())                       # print the XML for this STIX Package
```

### Parsing STIX XML

```
from stix.core import STIXPackage      # Import the STIX Package API

fn = 'stix_content.xml'                # The STIX content filename
stix_package = STIXPackage.from_xml(fn) # Parse using the from_xml() method
```

## Examples

The python-stix GitHub repository contains several example scripts that help illustrate the capabilities of the APIs. These examples can be found [here](#). Accompanying walkthrough [slides](#) are available. These scripts are simple command line utilities that can be executed by passing the name of the script to a Python interpreter.

```
Example:
$ python ex_01.py
```

---

**Note:** You must install python-stix before running these example scripts.

---

**Version:** 1.1.1.8

## Examples

This page includes some basic examples of creating and parsing STIX content.

There are a couple things we do in these examples for purposes of demonstration that shouldn't be done in production code:

- When calling `to_xml()`, we use `include_namespaces=False`. This is to make the example output easier to read, but means the resulting output cannot be successfully parsed. The XML parser doesn't know what namespaces to use if they aren't included. In production code, you should explicitly set `include_namespaces` to `True` or omit it entirely (`True` is the default).
- In some examples, we use `set_id_method(IDGenerator.METHOD_INT)` to make IDs for STIX constructs easier to read and cross-reference within the XML document. In production code, you should omit this statement, which causes random UUIDs to be created instead, or create explicit IDs yourself for STIX constructs.

See the [STIX Idioms](#) documentation for more great examples of how to use `python-stix`.

## Creating a STIX Package

```
from stix.core import STIXPackage, STIXHeader
from stix.utils import IDGenerator, set_id_method

set_id_method(IDGenerator.METHOD_INT) # For testing and demonstration only!

stix_package = STIXPackage()
stix_header = STIXHeader()
stix_header.description = "Getting Started!"
stix_package.stix_header = stix_header

print stix_package.to_xml(include_namespaces=False)
```

Which outputs:

```
<stix:STIX_Package id="example:Package-1" version="1.1.1" timestamp="2014-08-12T18:03:44.240457+00:00">
    <stix:STIX_Header>
        <stix:Description>Getting Started!</stix:Description>
    </stix:STIX_Header>
</stix:STIX_Package>
```

## ID Namespaces

By default, `python-stix` sets the default ID namespace to `http://example.com` with an alias of `example`. This results in STIX id declarations that look like `id="example:Package-2813128d-f45e-41f7-b10a-20a5656e3785"`.

To change this, use the `stix.utils.set_id_namespace()` method which takes a dictionary as a parameter.

```
from stix.core import STIXPackage
from stix.utils import set_id_namespace

NAMESPACE = {"http://MY-NAMESPACE.com" : "myNS"}
set_id_namespace(NAMESPACE) # new ids will be prefixed by "myNS"
```

```
stix_package = STIXPackage() # id will be created automatically
print stix_package.to_xml()
```

Which outputs:

```
<stix:STIX_Package
    xmlns:myNS="http://MY-NAMESPACE.com"
    xmlns:stixCommon="http://stix.mitre.org/common-1"
    xmlns:stixVocabs="http://stix.mitre.org/default_vocabularies-1"
    xmlns:stix="http://stix.mitre.org/stix-1"
    xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
    xsi:schemaLocation="
        http://stix.mitre.org/common-1 http://stix.mitre.org/XMLSchema/common/1.1.1/stix_common.xsd
        http://stix.mitre.org/default_vocabularies-1 http://stix.mitre.org/XMLSchema/default_vocabularies.xsd
        http://stix.mitre.org/stix-1 http://stix.mitre.org/XMLSchema/core/1.1.1/stix_core.xsd"
    id="myNS:Package-b2039368-9476-4a5b-8c1d-0ef5d1b37e06" version="1.1.1" timestamp="2014-08-12T18:00:00Z">
```

Success! The `xmlns:myNS="http://MY-NAMESPACE.com"` matches our NAMESPACE dictionary and the `id` attribute includes the `myNS` namespace alias.

## Working With CybOX

If you are creating CybOX entities such as Observables, you'll want to set the ID namespace for `python-cybox` as well.

Note that `python-stix` and `python-cybox` treat namespaces slightly differently (for now anyway). Where `python-stix` uses Python dictionaries, `python-cybox` uses the `cybox.utils.Namespace` class to represent a namespace.

```
from cybox.utils import set_id_namespace, Namespace
from cybox.core import Observable

NAMESPACE = Namespace("http://MY-NAMESPACE.com", "myNS")
set_id_namespace(NAMESPACE)

obs = Observable()
print obs.to_xml()
```

Which outputs:

```
<cybox:ObservableType
    xmlns:myNS="http://MY-NAMESPACE.com"
    xmlns:cybox="http://cybox.mitre.org/cybox-2"
    xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
    xsi:schemaLocation="http://cybox.mitre.org/cybox-2 http://cybox.mitre.org/XMLSchema/core/2.1/cybox-2.xsd"
    id="myNS:Observable-7e6191d3-25e9-4283-a80c-867e175224ae">
</cybox:ObservableType>
```

Success (again)! The `xmlns:myNS="http://MY-NAMESPACE.com"` matches our `Namespace` object and the `id` attribute includes the `myNS` namespace alias.

## Controlled Vocabularies: VocabString

Many fields in STIX leverage the `stixCommon:ControlledVocabularyStringType`, which acts as a base type for controlled vocabulary implementations. The STIX language defines a set of default controlled vocabularies which are found in the `stix_default_vocabs.xsd` XML Schema file.

The `python-stix` library contains a `stix.common.vocabs` module, which defines the `VocabString` class implementation of the schema `ControlledVocabularyStringType` as well as `VocabString` implementations which correspond to default controlled vocabularies.

For example, the `stix_default_vocabularies.xsd` schema defines a controlled vocabulary for STIX Package Intents: `PackageIntentVocab-1.0`. The `stix.common.vocabs` module contains an analogous `PackageIntent` class, which acts as a derivation of `VocabString`.

Each `VocabString` implementation contains:

- A static list of class-level term attributes, each beginning with `TERM_`` (e.g., `'TERM_INDICATORS`)
- A tuple containing all allowed vocabulary terms: `ALLOWED_VALUES`, which is used for input validation
- Methods found on `stix.Entity`, such as `to_xml()`, `to_dict()`, `from_dict()`, etc.

## Interacting With `VocabString` Fields

The following sections define ways of interacting with `VocabString` fields.

### Default Vocabulary Terms

The STIX Language often suggests a default controlled vocabulary type for a given controlled vocabulary field. Each controlled vocabulary contains an enumeration of allowed terms.

Each `VocabString` implementation found in the `stix.common.vocabs` module contains static class-level attributes for each vocabulary term. When setting controlled vocabulary field values, it is recommended that users take advantage of these class-level attributes.

The following demonstrates setting the `Package_Intent` field with a default vocabulary term. Note that the `STIXHeader.package_intents` property returns a list. As such, we use the `append()` method to add terms. Other STIX controlled vocabulary fields may only allow one value rather than a list of values.

```
from stix.core import STIXHeader
from stix.common.vocabs import PackageIntent

header = STIXHeader()
header.package_intents.append(PackageIntent.TERM_INDICATORS)

print header.to_xml(include_namespaces=False)
```

Which outputs:

```
<stix:STIXHeaderType>
  <stix:Package_Intent xsi:type="stixVocabs:PackageIntentVocab-1.0">Indicators</stix:Package_Intent>
</stix:STIXHeaderType>
```

### Non-Default Vocabulary Terms

Though it is suggested, STIX content authors are not required to use the default controlled vocabulary for a given field. As such, `python-stix` allows users to pass in non-default values for controlled vocabulary fields.

To set a controlled vocabulary to a non-default vocabulary term, pass a `VocabString` instance into a controlled vocabulary field.

A raw `VocabString` field will contain no `xsi:type` information or `ALLOWED_VALUES` members, which removes the input and schema validation requirements.

```
from stix.core import STIXHeader
from stix.common.vocabs import VocabString, PackageIntent

header = STIXHeader()
non_default_term = VocabString("NON-DEFAULT VOCABULARY TERM")
header.package_intents.append(non_default_term)

print header.to_xml(include_namespaces=False)
```

Which outputs:

```
<stix:STIXHeaderType>
    <stix:Package_Intent>NON-DEFAULT VOCABULARY TERM</stix:Package_Intent>
</stix:STIXHeaderType>
```

Notice that the `<stix:Package_Intent>` field does not have an `xsi:type` attribute. As such, this field can contain any string value and is not bound by a controlled vocabulary enumeration of terms.

### Working With Custom Controlled Vocabularies

STIX allows content authors and developers to extend the `ControlledVocabularyStringType` schema type for the definition of new controlled vocabularies. The `python-stix` library allows developers to create and register Python types which mirror the custom XML Schema vocabulary types.

**XSD Example** The following XML Schema example shows the definition of a new custom controlled vocabulary schema type. Instances of this schema type could be used wherever a `ControlledVocabularyStringType` instance is expected (e.g., the `STIX_Header/Package_Intent` field).

Filename: `customVocabs.xsd`

```
<xs:schema
    xmlns:xs="http://www.w3.org/2001/XMLSchema"
    xmlns:customVocabs="http://customvocabs.com/vocabs-1"
    xmlns:stixVocabs="http://stix.mitre.org/default_vocabularies-1"
    xmlns:stixCommon="http://stix.mitre.org/common-1"
    targetNamespace="http://customvocabs.com/vocabs-1"
    elementFormDefault="qualified"
    version="1.1.1"
    xml:lang="English">
    <xs:import namespace="http://stix.mitre.org/common-1" schemaLocation="http://stix.mitre.org/XMLSchema/STIX/Common/common-1.xsd"/>
    <xs:complexType name="CustomVocab-1.0">
        <xs:simpleContent>
            <xs:restriction base="stixCommon:ControlledVocabularyStringType">
                <xs:simpleType>
                    <xs:union memberTypes="customVocabs:CustomEnum-1.0"/>
                </xs:simpleType>
                <xs:attribute name="vocab_name" type="xs:string" use="optional" fixed="Test Vocab"/>
                <xs:attribute name="vocab_reference" type="xs:anyURI" use="optional" fixed="http://example.com/vocab">
                </xs:restriction>
            </xs:simpleContent>
        </xs:complexType>
        <xs:simpleType name="CustomEnum-1.0">
            <xs:restriction base="xs:string">
                <xs:enumeration value="FOO"/>
                <xs:enumeration value="BAR"/>
            </xs:restriction>
        </xs:simpleType>
    </xs:complexType>
</xs:schema>
```

```
</xs:simpleType>
</xs:schema>
```

**XML Instance Sample** The following STIX XML instance document shows a potential use of this field. Note the `xsi:type=customVocabs:CustomVocab-1.0` on the `Package_Intent` field.

```
Filename: customVocabs.xml

<stix:STIX_Package
    xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
    xmlns:stixExample="http://stix.mitre.org/example"
    xmlns:stix="http://stix.mitre.org/stix-1"
    xmlns:customVocabs="http://customvocabs.com/vocabs-1"
    xsi:schemaLocation="
        http://stix.mitre.org/stix-1 /path/to/stix_core.xsd
        http://customvocabs.com/vocabs-1 /path/to/customVocabs.xsd"
    id="stixExample:STIXPackage-33fe3b22-0201-47cf-85d0-97c02164528d"
    timestamp="2014-05-08T09:00:00.000000Z"
    version="1.1.1">
    <stix:STIX_Header>
        <stix:Package_Intent xsi:type="customVocabs:CustomVocab-1.0">FOO</stix:Package_Intent>
    </stix:STIX_Header>
</stix:STIX_Package>
```

**Python Code** To parse content which uses custom controlled vocabularies, Python developers don't have to do anything special—you just call `STIXPackage.from_xml()` on the input and all the namespaces, `xsi:type`s, etc. are attached to each instance of `VocabString`. When serializing the document, the input namespaces and `xsi:type` attributes are retained!

However, to *create* new content which utilizes a schema defined and enforced custom controlled vocabulary, developers must create a `VocabString` implementation which mirrors the schema definition.

For our `CustomVocab-1.0` schema type, the Python would look like this:

```
from stix.common import vocabs

# Create a custom vocabulary type
class CustomVocab(vocabs.VocabString):
    _namespace = 'http://customvocabs.com/vocabs-1'
    _XSI_TYPE = 'customVocabs:CustomVocab-1.0'
    _ALLOWED_VALUES = ('FOO', 'BAR')

# Register the type as a VocabString
vocabs.add_vocab(CustomVocab)
```

As you can see, we can express a lot of the same information found in the XML Schema definition, just with a lot less typing!

- `_namespace`: The targetNamespace for our custom vocabulary
- **\_XSI\_TYPE: The `xsi:type` attribute value to write out for instances** of this vocabulary.
- `_ALLOWED_VALUES`: A tuple of allowable values for this vocabulary.

---

**Note:** The call to `add_vocab()` registers the class and its `xsi:type` as a `VocabString` implementation so `python-stix` will know to build instances of `CustomVocab` when parsed content contains `CustomVocab-1.0` content. You must call `add_vocab()` to register your class prior to parsing content if you want the parser to build instances of your custom vocabulary class!

```

# builtin
from StringIO import StringIO

# python-stix modules
from stix.core import STIXPackage
from stix.common import vocabs

XML = \
"""
<stix:STIX_Package
    xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
    xmlns:stix="http://stix.mitre.org/stix-1"
    xmlns:customVocabs="http://customvocabs.com/vocabs-1"
    xmlns:example="http://example.com/"
    xsi:schemaLocation="
        http://stix.mitre.org/stix-1 /path/to/stix_core.xsd
        http://customvocabs.com/vocabs-1 /path/to/customVocabs.xsd"
    id="example:STIXPackage-33fe3b22-0201-47cf-85d0-97c02164528d"
    timestamp="2014-05-08T09:00:00.000000Z"
    version="1.1.1">
    <stix:STIX_Header>
        <stix:Package_Intent xsi:type="customVocabs:CustomVocab-1.0">FOO</stix:Package_Intent>
    </stix:STIX_Header>
</stix:STIX_Package>
"""

# Create a VocabString class for our CustomVocab-1.0 vocabulary which
class CustomVocab(vocabs.VocabString):
    _namespace = 'http://customvocabs.com/vocabs-1'
    _XSI_TYPE = 'customVocabs:CustomVocab-1.0'
    _ALLOWED_VALUES = ('FOO', 'BAR')

# Register our Custom Vocabulary class so parsing builds instances of
# CustomVocab
vocabs.add_vocab(CustomVocab)

# Parse the input document
sio = StringIO(XML)
package = STIXPackage.from_xml(sio)

# Retrieve the first (and only) Package_Intent entry
package_intent = package.stix_header.package_intents[0]

# Print information about the input Package_Intent
print type(package_intent), package_intent.xsi_type, package_intent

# Add another Package Intent
bar = CustomVocab('BAR')
package.stix_header.add_package_intent(bar)

# This will include the 'BAR' CustomVocab entry
print package.to_xml()

```

**Version:** 1.1.1.8

## APIs or bindings?

This page describes both the **APIs** and the **bindings** provided by the *python-stix* library.

### Overview

The python-stix library provides APIs and utilities that aid in the creation, consumption, and processing of Structured Threat Information eXpression (STIX) content. The APIs that drive much of the functionality of python-stix sit on top of a binding layer that acts as a direct connection between Python and the STIX XML. Because both the APIs and the bindings allow for the creation and development of STIX content, developers that are new to python-stix may not understand the differences between the two. This document aims to identify the purpose and uses of the APIs and bindings.

### Bindings

The python-stix library leverages machine generated XML-to-Python bindings for the creation and processing of STIX content. These bindings are created using the `generateDS` utility and can be found under `stix.bindings` within the package hierarchy.

The STIX bindings allow for a direct, complete mapping between Python classes and STIX XML Schema data structures. That being said, it is possible (though not advised) to use only the STIX bindings to create STIX documents. However, because the code is generated from XML Schema without contextual knowledge of relationships or broader organizational/developmental schemes, it is often a cumbersome and laborious task to create even the simplest of STIX documents.

Developers within the python-stix team felt that the binding code did not lend itself to rapid development or natural navigation of data, and so it was decided that a higher-level API should be created.

### APIs

The python-stix APIs are classes and utilities that leverage the STIX bindings for the creation and processing of STIX content. The APIs are designed to behave more naturally when working with STIX content, allowing developers to conceptualize and interact with STIX documents as pure Python objects and not XML Schema objects.

The APIs provide validation of inputs, multiple input and output formats, more Pythonic access of data structure internals and interaction with classes, and better interpretation of a developer's intent through datatype coercion and implicit instantiation.

---

**Note:** The python-stix APIs are under constant development. Our goal is to provide full API coverage of the STIX data structures, but not all structures are exposed via the APIs yet. Please refer to the [API Reference](#) for API coverage details.

---

### Brevity Wins

The two code examples show the difference in creating and printing a simple STIX document consisting of only a STIX Package and a STIX Header with a description and produced time using the python-stix and python-cybox bindings. Both examples will produce the same STIX XML!

#### API Example

```

from datetime import datetime
from stix.core import STIXPackage, STIXHeader
from stix.common import InformationSource
from cybox.common import Time

# Create the STIX Package and STIX Header objects
stix_package = STIXPackage()
stix_header = STIXHeader()

# Set the description
stix_header.description = 'APIs vs. Bindings Wiki Example'

# Set the produced time to now
stix_header.information_source = InformationSource()
stix_header.information_source.time = Time()
stix_header.information_source.time.produced_time = datetime.now()

# Build document
stix_package.stix_header = stix_header

# Print the document to stdout
print(stix_package.to_xml())

```

## Binding Example

```

import sys
from datetime import datetime

import stix.bindings.stix_core as stix_core_binding
import stix.bindings.stix_common as stix_common_binding
import cybox.bindings.cybox_common as cybox_common_binding

# Create the STIX Package and STIX Header objects
stix_package = stix_core_binding.STIXType()
stix_header = stix_core_binding.STIXHeaderType()

# Set the description
stix_header_description = stix_common_binding.StructuredTextType()
stix_header_description.set_valueOf_('APIs vs. Bindings Wiki Example')

# Set the produced time to now
stix_header_time = cybox_common_binding.TimeType()
stix_header_time.set_Produced_Time(datetime.now())

# Bind the time to the STIX Header's Information Source element
stix_header_info_source = stix_common_binding.InformationSourceType()
stix_header_info_source.set_Time(stix_header_time)

# Build the document
stix_header.set_Description(stix_header_description)
stix_header.set_Information_Source(stix_header_info_source)
stix_package.set_STIX_Header(stix_header)

# Print the document to stdout
stix_package.export(sys.stdout, 0, stix_core_binding.DEFAULT_XML_NS_MAP)

```

## **Feedback**

If there is a problem with the APIs or bindings, or if there is functionality missing from the APIs that forces the use of the bindings, let us know in the [python-stix issue tracker](#)

---

## API Reference

---

**Version:** 1.1.1.8

## API Reference

The *python-stix* APIs are the recommended tools for reading, writing, and manipulating STIX XML documents.

---

**Note:** The python-stix APIs are currently under development. As such, API coverage of STIX data constructs is incomplete; please bear with us as we work toward complete coverage. This documentation also serves to outline current API coverage.

---

## STIX

Modules located in the base `stix` package

**Version:** 1.1.1.8

### `stix.base` Module

#### Classes

##### `class stix.base.Entity`

Base class for all classes in the STIX API.

###### `find(id_)`

Searches the children of a `Entity` implementation for an object with an `id_` property that matches `id_`.

###### `to_xml(include_namespaces=True, include_schemalocs=False, ns_dict=None, schemaloc_dict=None, pretty=True, auto_namespace=True, encoding='utf-8')`

Serializes a `Entity` instance to an XML string.

The default character encoding is `utf-8` and can be set via the `encoding` parameter. If `encoding` is `None`, a string (`unicode` in Python 2, `str` in Python 3) is returned.

#### Parameters

- **auto\_namespace** – Automatically discover and export XML namespaces for a STIX `Entity` instance.

- **include\_namespaces** – Export namespace definitions in the output XML. Default is True.
- **include\_schemalocs** – Export xsi:schemaLocation attribute in the output document. This will attempt to associate namespaces declared in the STIX document with schema locations. If a namespace cannot be resolved to a schemaLocation, a Python warning will be raised. Schemalocations will only be exported if *include\_namespaces* is also True.
- **ns\_dict** – Dictionary of XML definitions (namespace is key, alias is value) to include in the exported document. This must be passed in if *auto\_namespace* is False.
- **schemaloc\_dict** – Dictionary of XML namespace: schema location mappings to include in the exported document. These will only be included if *auto\_namespace* is False.
- **pretty** – Pretty-print the XML.
- **encoding** – The output character encoding. Default is utf-8. If *encoding* is set to None, a string (unicode in Python 2, str in Python 3) is returned.

**Returns** An XML string for this *Entity* instance. Default character encoding is utf-8.

```
class stix.base.EntityList(*args)
    Bases: mixbox.entities.EntityList, stix.base.Entity
```

**Version:** 1.1.1.8

## stix.data\_marking Module

### Classes

```
class stix.data_marking.Marking(markings=None)
    Bases: stix.base.EntityList

class stix.data_marking.MarkingSpecification(controlled_structure=None,           mark-
                                              ing_structures=None)
    Bases: stix.base.Entity

class stix.data_marking.MarkingStructure
    Bases: stix.base.Entity
```

### Functions

```
stix.data_marking.add_extension(cls)
    Registers a stix.Entity class as an implementation of an xml type.

    Classes must have an _XSI_TYPE class attributes to be registered. The value of this attribute must be a valid
    xsi:type.
```

---

**Note:** This was designed for internal use.

---

## Constants

## STIX Campaign

Modules located in the `stix.campaign` package

**Version:** 1.1.1.8

### `stix.campaign` Module

#### Classes

```
class stix.campaign.Campaign(id_=None, idref=None, timestamp=None, title=None, description=None, short_description=None)
```

Bases: `stix.base.BaseCoreComponent`

Implementation of the STIX Campaign.

#### Parameters

- **`id`** (*optional*) – An identifier. If None, a value will be generated via `mixbox.idgen.create_id()`. If set, this will unset the `idref` property.
- **`idref`** (*optional*) – An identifier reference. If set this will unset the `id_` property.
- **`timestamp`** (*optional*) – A timestamp value. Can be an instance of `datetime.datetime` or `str`.
- **`description`** – A description of the purpose or intent of this object.
- **`short_description`** – A short description of the intent or purpose of this object.
- **`title`** – The title of this object.

#### `add_activity`(*value*)

Adds an `Activity` object to the activity collection.

```
class stix.campaign.AssociatedCampaigns(scope=None, *args)
```

Bases: `stix.common.related.GenericRelationshipList`

```
class stix.campaign.Attribution(scope=None, *args)
```

Bases: `stix.common.related.GenericRelationshipList`

```
class stix.campaign.Names(*args)
```

Bases: `stix.base.EntityList`

```
class stix.campaign.RelatedIncidents(scope=None, *args)
```

Bases: `stix.common.related.GenericRelationshipList`

```
class stix.campaign.RelatedIndicators(scope=None, *args)
```

Bases: `stix.common.related.GenericRelationshipList`

```
class stix.campaign.RelatedTTPs(scope=None, *args)
```

Bases: `stix.common.related.GenericRelationshipList`

## STIX Common

Modules located in the `stix.common` package

**Version:** 1.1.1.8

## **stix.common Module**

### **Classes**

```
class stix.common.EncodedCDATA(value=None, encoded=None)
    Bases: stix.base.Entity
```

**Version:** 1.1.1.8

## **stix.common.activity Module**

### **Classes**

```
class stix.common.activity.Activity
    Bases: stix.base.Entity
```

**Version:** 1.1.1.8

## **stix.common.confidence Module**

### **Classes**

```
class stix.common.confidence.Confidence(value=None, timestamp=None, description=None,
                                         source=None)
    Bases: stix.base.Entity
```

**Version:** 1.1.1.8

## **stix.common.datetimewithprecision Module**

### **Classes**

```
class stix.common.datetimewithprecision.DateTimeWithPrecision(value=None, precision='second')
    Bases: stix.base.Entity
```

### **Constants**

```
stix.common.datetimewithprecision.DATE_PRECISION_VALUES = ('year', 'month', 'day')
tuple() -> empty tuple tuple(iterable) -> tuple initialized from iterable's items
```

If the argument is a tuple, the return value is the same object.

```
stix.common.datetimewithprecision.TIME_PRECISION_VALUES = ('hour', 'minute', 'second')
tuple() -> empty tuple tuple(iterable) -> tuple initialized from iterable's items
```

If the argument is a tuple, the return value is the same object.

```
stix.common.datetimewithprecision.DATETIME_PRECISION_VALUES = ('year', 'month', 'day', 'hour', 'minute', 'second')
tuple() -> empty tuple tuple(iterable) -> tuple initialized from iterable's items
```

If the argument is a tuple, the return value is the same object.

**Version:** 1.1.1.8

**stix.common.identity Module****Classes**

```
class stix.common.identity.Identity (id=None, idref=None, name=None, re-
lated_identities=None)
    Bases: stix.base.Entity

class stix.common.identity.RelatedIdentities (*args)
    Bases: stix.base.EntityList
```

**Functions**

stix.common.identity.add\_extension(*cls*)  
Registers a stix.Entity class as an implementation of an xml type.

Classes must have an \_XSI\_TYPE class attributes to be registered. The value of this attribute must be a valid xsi:type.

---

**Note:** This was designed for internal use.

---

**Constants**

**Version:** 1.1.1.8

**stix.common.information\_source Module****Classes**

```
class stix.common.information_source.InformationSource (description=None, iden-
tity=None, time=None,
tools=None, contribut-
ing_sources=None, refer-
ences=None)
    Bases: stix.base.Entity

class stix.common.information_source.ContributingSources (*args)
    Bases: stix.base.EntityList
```

**Version:** 1.1.1.8

**stix.common.kill\_chains Module****Classes**

```
class stix.common.kill_chains.KillChain (id=None, name=None, definer=None, refer-
ence=None)
    Bases: stix.base.Entity

class stix.common.kill_chains.KillChains (*args)
    Bases: stix.base.EntityList
```

```
class stix.common.kill_chains.KillChainPhase(phase_id=None,      name=None,      ordinal-
                                              ity=None)
    Bases: stix.base.Entity

class stix.common.kill_chains.KillChainPhaseReference(phase_id=None,      name=None,
                                                       ordinality=None,
                                                       kill_chain_id=None,
                                                       kill_chain_name=None)
    Bases: stix.common.kill_chains.KillChainPhase

class stix.common.kill_chains.KillChainPhasesReference(*args)
    Bases: stix.base.EntityList
```

## Lockheed Martin Kill Chain

There is a shortcut for adding kill chain phases from the Lockheed Martin Cyber Kill Chain to indicators:

```
from stix.common.kill_chains.lmco import PHASE_RECONNAISSANCE
from stix.indicator import Indicator
i = Indicator()
i.add_kill_chain_phase(PHASE_RECONNAISSANCE)
print i.to_xml(include_namespaces=False)
```

```
<indicator:Indicator id="example:indicator-2bb1c0ea-7dd8-40fb-af64-7199f00719c1"
    timestamp="2015-03-17T19:14:22.797675+00:00" xsi:type='indicator:IndicatorType'>
    <indicator:Kill_Chain_Phases>
        <stixCommon:Kill_Chain_Phase phase_id="stix:TTP-af1016d6-a744-4ed7-ac91-00fe2272185a"/>
    </indicator:Kill_Chain_Phases>
</indicator:Indicator>
```

**Version:** 1.1.1.8

## stix.common.related Module

### Classes

```
class stix.common.related.GenericRelationship(confidence=None,           information_
                                              source=None, relationship=None)
    Bases: stix.base.Entity
```

```
class stix.common.related.GenericRelationshipList(scope=None, *args)
    Bases: stix.base.EntityList
```

Base class for concrete GenericRelationshipList types.

---

**Note:** Subclasses must supply exactly one multiple TypedField.

---

```
class stix.common.related.RelatedPackageRef(idref=None,           timestamp=None,       confidence=None,           information_
                                              source=None, relationship=None)
    Bases: stix.common.related.GenericRelationship
```

```
class stix.common.related.RelatedPackageRefs(*args)
    Bases: stix.base.EntityList
```

```
class stix.common.related._BaseRelated(item=None,           confidence=None,           information_
                                              source=None, relationship=None)
    Bases: stix.common.related.GenericRelationship
```

A base class for related types.

This class is not a real STIX type and should not be directly instantiated.

---

**Note:** Subclasses must supply a TypedField named *item*!

---

```
class stix.common.related.RelatedCampaign (item=None, confidence=None, information_source=None, relationship=None)
    Bases: stix.common.related._BaseRelated

class stix.common.related.RelatedCOA (item=None, confidence=None, information_source=None, relationship=None)
    Bases: stix.common.related._BaseRelated

class stix.common.related.RelatedExploitTarget (item=None, confidence=None, information_source=None, relationship=None)
    Bases: stix.common.related._BaseRelated

class stix.common.related.RelatedIdentity (item=None, confidence=None, information_source=None, relationship=None)
    Bases: stix.common.related._BaseRelated

class stix.common.related.RelatedIncident (item=None, confidence=None, information_source=None, relationship=None)
    Bases: stix.common.related._BaseRelated

class stix.common.related.RelatedIndicator (item=None, confidence=None, information_source=None, relationship=None)
    Bases: stix.common.related._BaseRelated

class stix.common.related.RelatedObservable (item=None, confidence=None, information_source=None, relationship=None)
    Bases: stix.common.related._BaseRelated

class stix.common.related.RelatedThreatActor (item=None, confidence=None, information_source=None, relationship=None)
    Bases: stix.common.related._BaseRelated

class stix.common.related.RelatedTTP (item=None, confidence=None, information_source=None, relationship=None)
    Bases: stix.common.related._BaseRelated
```

**Version:** 1.1.1.8

## stix.common.statement Module

### Classes

```
class stix.common.statement.Statement (value=None, timestamp=None, description=None, source=None)
    Bases: stix.base.Entity
```

**Version:** 1.1.1.8

## stix.common.structured\_text Module

## Classes

```
class stix.common.structured_text.StructuredText (value=None)
    Bases: stix.base.Entity
```

Used for storing descriptive text elements.

### `id_`

An id for the text element, typically used for controlled structure xpath selectors.

### `value`

The text value of this object.

### `structuring_format`

The format of the text. For example, html5.

### `__str__()`

Returns a UTF-8 encoded string representation of the value.

### `__unicode__()`

Returns a unicode string representation of the value.

### `to_dict()`

Converts this object into a dictionary representation.

---

**Note:** If no properties or attributes are set other than `value`, this will return a string.

---

**Version:** 1.1.1.8

## stix.common.tools Module

## Classes

```
class stix.common.tools.ToolInformation (title=None, short_description=None,
                                         tool_name=None, tool_vendor=None)
    Bases: stix.base.Entity, cybox.common.tools.ToolInformation
```

**Version:** 1.1.1.8

## stix.common.vocabs Module

## Classes

```
class stix.common.vocabs.VocabString (value=None)
    Bases: stix.base.Entity
```

### `is_plain()`

Whether the VocabString can be represented as a single value.

`stix.common.vocabs.AssetType`

alias of AssetType\_1\_0

`stix.common.vocabs.AttackerInfrastructureType`

alias of AttackerInfrastructureType\_1\_0

`stix.common.vocabs.AttackerToolType`

alias of AttackerToolType\_1\_0

```
stix.common.vocabs.AvailabilityLossType
    alias of AvailabilityLossType_1_1_1

stix.common.vocabs.CampaignStatus
    alias of CampaignStatus_1_0

stix.common.vocabs.COAStage
    alias of COAStage_1_0

stix.common.vocabs.CourseOfActionType
    alias of CourseOfActionType_1_0

stix.common.vocabs.DiscoveryMethod
    alias of DiscoveryMethod_2_0

stix.common.vocabs.HighMediumLow
    alias of HighMediumLow_1_0

stix.common.vocabs.ImpactQualification
    alias of ImpactQualification_1_0

stix.common.vocabs.ImpactRating
    alias of ImpactRating_1_0

stix.common.vocabs.IncidentCategory
    alias of IncidentCategory_1_0

stix.common.vocabs.IncidentEffect
    alias of IncidentEffect_1_0

stix.common.vocabs.IncidentStatus
    alias of IncidentStatus_1_0

stix.common.vocabs.IndicatorType
    alias of IndicatorType_1_1

stix.common.vocabs.InformationSourceRole
    alias of InformationSourceRole_1_0

stix.common.vocabs.InformationType
    alias of InformationType_1_0

stix.common.vocabs.IntendedEffect
    alias of IntendedEffect_1_0

stix.common.vocabs.LocationClass
    alias of LocationClass_1_0

stix.common.vocabs.LossDuration
    alias of LossDuration_1_0

stix.common.vocabs.LossProperty
    alias of LossProperty_1_0

stix.common.vocabs.MalwareType
    alias of MalwareType_1_0

stix.common.vocabs.ManagementClass
    alias of ManagementClass_1_0

stix.common.vocabs.Motivation
    alias of Motivation_1_1
```

```
stix.common.vocabs.OwnershipClass
    alias of OwnershipClass_1_0

stix.common.vocabs.PackageIntent
    alias of PackageIntent_1_0

stix.common.vocabs.PlanningAndOperationalSupport
    alias of PlanningAndOperationalSupport_1_0_1

stix.common.vocabs.SecurityCompromise
    alias of SecurityCompromise_1_0

stix.common.vocabs.SystemType
    alias of SystemType_1_0

stix.common.vocabs.ThreatActorSophistication
    alias of ThreatActorSophistication_1_0

stix.common.vocabs.ThreatActorType
    alias of ThreatActorType_1_0
```

## Functions

```
stix.common.vocabs.add_vocab(cls)
Registers a VocabString subclass.
```

---

**Note:** The `register_vocab()` class decorator has replaced this method.

---

## Constants

## STIX Core

Modules located in the `stix.core` package

**Version:** 1.1.1.8

### `stix.core.stix_header` Module

#### Classes

```
class stix.core.stix_header.STIXHeader(package_intents=None, description=None, handling=None, information_source=None, title=None, short_description=None)
```

Bases: `stix.base.Entity`

The STIX Package Header.

#### Parameters

- **handling** – The data marking section of the Header.
- **information\_source** – The `InformationSource` section of the Header.
- **package\_intents** – A collection of `VocabString` defining the intent of the parent `STIXPackage`.
- **description** – A description of the intent or purpose of the parent `STIXPackage`.

- **short\_description** – A short description of the intent or purpose of the parent *STIXPackage*.
- **title** – The title of the *STIXPackage*.

**profiles**

A collection of STIX Profiles the parent *STIXPackage* conforms to.

**title**

The title of the parent *STIXPackage*.

**add\_profile(profile)**

Adds a profile to the STIX Header. A Profile is represented by a string URI.

**Version:** 1.1.1.8

**stix.core.stix\_package Module****Classes**

```
class stix.core.stix_package.STIXPackage(id_=None,      idref=None,      timestamp=None,
                                         stix_header=None,      courses_of_action=None,
                                         exploit_targets=None,      indicators=None,
                                         observables=None,      incidents=None,
                                         threat_actors=None,      ttps=None,      campaigns=None,
                                         related_packages=None)
```

Bases: *stix.base.Entity*

A STIX Package object.

**Parameters**

- **id** (*optional*) – An identifier. If None, a value will be generated via `mixbox.idgen.create_id()`. If set, this will unset the `idref` property.
- **idref** – An identifier reference. If set this will unset the `id` property.
- **timestamp** – A timestamp value. Can be an instance of `datetime.datetime` or str.
- **stix\_header** – A Report Header object.
- **campaigns** – A collection of *Campaign* objects.
- **courses\_of\_action** – A collection of *CourseOfAction* objects.
- **exploit\_targets** – A collection of *ExploitTarget* objects.
- **incidents** – A collection of *Incident* objects.
- **indicators** – A collection of *Indicator* objects.
- **threat\_actors** – A collection of *ThreatActor* objects.
- **ttps** – A collection of *TTP* objects.
- **related\_packages** – A collection of *RelatedPackage* objects.

**add(entity)**

Adds *entity* to a top-level collection. For example, if *entity* is an *Indicator* object, the *entity* will be added to the *indicators* top-level collection.

**add\_campaign(campaign)**

Adds a *Campaign* object to the *campaigns* collection.

```
add_course_of_action(course_of_action)
    Adds an CourseOfAction object to the courses_of_action collection.

add_exploit_target(exploit_target)
    Adds an ExploitTarget object to the exploit_targets collection.

add_incident(incident)
    Adds an Incident object to the incidents collection.

add_indicator(indicator)
    Adds an Indicator object to the indicators collection.

add_observable(observable)
    Adds an Observable object to the observables collection.

    If observable is not an Observable instance, an effort will be made to convert it to one.

add_related_package(related_package)
    Adds a RelatedPackage object to the related_packages collection.

add_threat_actor(threat_actor)
    Adds an ThreatActor object to the threat_actors collection.

add_ttp(ttp)
    Adds an TTP object to the ttps collection.

classmethod from_xml(xml_file, encoding=None)
    Parses the xml_file file-like object and returns a STIXPackage instance.
```

#### Parameters

- **xml\_file** – A file, file-like object, etree.\_Element, or etree.\_ElementTree instance.
- **encoding** – The character encoding of the *xml\_file* input. If None, an attempt will be made to determine the input character encoding. Default is None.

**Returns** class:[STIXPackage](#).

**Return type** An instance of

```
class stix.core.stix_package.RelatedPackages(scope=None, *args)
    Bases: stix.common.related.GenericRelationshipList
```

**Version:** 1.1.1.8

## stix.core.ttps Module

### Classes

```
class stix.core.ttps.TTPs(ttps=None)
    Bases: stix.base.EntityList
```

## STIX Course of Action (COA)

Modules located in the [stix.coa](#) package

**Version:** 1.1.1.8

## stix.coa Module

### Classes

```
class stix.coa.CourseOfAction(id_=None, idref=None, timestamp=None, title=None, description=None, short_description=None)
```

Bases: stix.base.BaseCoreComponent

Implementation of the STIX Course of Action.

#### Parameters

- **id** (*optional*) – An identifier. If None, a value will be generated via mixbox.idgen.create\_id(). If set, this will unset the idref property.
- **idref** (*optional*) – An identifier reference. If set this will unset the id\_ property.
- **timestamp** (*optional*) – A timestamp value. Can be an instance of datetime.datetime or str.
- **description** – A description of the purpose or intent of this object.
- **short\_description** – A short description of the intent or purpose of this object.
- **title** – The title of this object.

```
class stix.coa.RelatedCOAs(scope=None, *args)
```

Bases: stix.common.related.GenericRelationshipList

**Version:** 1.1.1.8

## stix.coa.objective Module

### Classes

```
class stix.coa.objective.Objective(description=None, short_description=None)
```

Bases: stix.base.Entity

## STIX Exploit Target

Modules located in the `stix.exploit_target` package

**Version:** 1.1.1.8

## stix.exploit\_target Module

### Overview

The `stix.exploit_target` module implements ExploitTarget. This denotes the specific vulnerability, weakness, or software configuration that creates a security risk.

### Documentation Resources

- ExploitTarget Data Model
- ExploitTarget Idioms

## Classes

```
class stix.exploit_target.ExploitTarget (id_=None, idref=None, timestamp=None, title=None,  
                                         description=None, short_description=None)
```

Bases: stix.base.BaseCoreComponent

Implementation of STIX Exploit Target.

### Parameters

- **id** (*optional*) – An identifier. If None, a value will be generated via mixbox.idgen.create\_id(). If set, this will unset the `idref` property.
- **idref** (*optional*) – An identifier reference. If set this will unset the `id` property.
- **title** (*optional*) – A string title.
- **timestamp** (*optional*) – A timestamp value. Can be an instance of `datetime.datetime` or `str`.
- **description** (*optional*) – A string description.
- **short\_description** (*optional*) – A string short description.

**add\_configuration** (*value*)

Adds a configuration to the `configurations` list property.

---

**Note:** If `None` is passed in no value is added

---

**Parameters** `value` – A configuration value.

**Raises** `ValueError` – If the `value` param is of type `Configuration`

**add\_vulnerability** (*value*)

Adds a vulnerability to the `vulnerabilities` list property.

---

**Note:** If `None` is passed in no value is added

---

**Parameters** `value` – A `Vulnerability` object..

**Raises** `ValueError` – if the `value` param is of type `Vulnerability`

**add\_weakness** (*value*)

Adds a weakness to the `weaknesses` list property.

---

**Note:** If `None` is passed in no value is added

---

**Parameters** `value` – A `Weakness` object.

**Raises:** `ValueError` if the `value` param is of type `Weakness`

```
class stix.exploit_target.PotentialCOAs (coas=None, scope=None)
```

Bases: `stix.common.related.GenericRelationshipList`

A list of Potential\_COA objects, defaults to empty array

```
class stix.exploit_target.RelatedExploitTargets (related_exploit_targets=None,  
                                                scope=None)
```

Bases: `stix.common.related.GenericRelationshipList`

A list of RelatedExploitTargets objects, defaults to empty array

**Version:** 1.1.1.8

## stix.exploit\_target.configuration Module

### Overview

The `stix.exploit_target.configuration` module captures the software configuration that causes a vulnerability in a system.

### Classes

```
class stix.exploit_target.configuration.Configuration(description=None,  
                                                    short_description=None,  
                                                    cce_id=None)
```

Bases: `stix.base.Entity`

Implementation of STIX Configuration.

#### Parameters

- `cce_id` (*optional*) – Common Configuration Enumeration value as a string
- `description` (*optional*) – A string description.
- `short_description` (*optional*) – A string short description.

**Version:** 1.1.1.8

## stix.exploit\_target.vulnerability Module

### Overview

The `stix.exploit_target.vulnerability` module captures the software version and specific bug that causes an exploitable condition.

### Classes

```
class stix.exploit_target.vulnerability.Vulnerability(title=None, description=None,  
                                                       short_description=None)
```

Bases: `stix.base.Entity`

Implementation of STIX Vulnerability.

#### Parameters

- `title` (*optional*) – A string title.
- `description` (*optional*) – A string description.
- `short_description` (*optional*) – A string short description.

```
class stix.exploit_target.vulnerability.CVSSVector
```

Bases: `stix.base.Entity`

Common Vulnerabilit Scoring System object, representing its component measures

```
class stix.exploit_target.vulnerability.AffectedSoftware(scope=None, *args)
    Bases: stix.common.related.GenericRelationshipList
```

**Version:** 1.1.1.8

## **stix.exploit\_target.weakness Module**

### **Overview**

The `stix.exploit_target.weakness` module captures a given software weakness as enumerated by CWE

### **Classes**

```
class stix.exploit_target.weakness.Weakness(description=None, cwe_id=None)
    Bases: stix.base.Entity
```

Implementation of STIX Weakness.

#### **Parameters**

- **cwe\_id** (*optional*) – Common Weakness Enumeration value as a string
- **description** (*optional*) – A string description.

## **STIX Extensions**

Modules located in the `stix.extensions` package

**Version:** 1.1.1.8

## **stix.extensions.identity.ciql\_identity\_3\_0 Module**

### **Classes**

```
class stix.extensions.identity.ciql_identity_3_0.CIQIdentity3_0Instance(roles=None,
    spec-
    ifica-
    tion=None)
    Bases: stix.common.identity.Identity
```

```
class stix.extensions.identity.ciql_identity_3_0.STIXCIQIdentity3_0(party_name=None,
    lan-
    guages=None,
    ad-
    dresses=None,
    organisa-
    tion_info=None,
    elec-
    tronic_address_identifiers=None,
    free_text_lines=None,
    con-
    tact_numbers=None,
    nationali-
    ties=None)
```

Bases: `stix.base.Entity`

**class** `stix.extensions.identity.ciq_identity_3_0.Address` (`free_text_address=None, country=None, administrative_area=None`)

Bases: `stix.base.Entity`

**class** `stix.extensions.identity.ciq_identity_3_0.AdministrativeArea` (`name_elements=None`)  
Bases: `stix.base.Entity`

**class** `stix.extensions.identity.ciq_identity_3_0._BaseNameElement` (`value=None`)  
Bases: `stix.base.Entity`

Do not instantiate directly: use PersonNameElement or OrganisationNameElement

**class** `stix.extensions.identity.ciq_identity_3_0.ContactNumber` (`contact_number_elements=None, communication_media_type=None`)

Bases: `stix.base.Entity`

**class** `stix.extensions.identity.ciq_identity_3_0.ContactNumberElement` (`value=None, type_=None`)  
Bases: `stix.base.Entity`

**class** `stix.extensions.identity.ciq_identity_3_0.Country` (`name_elements=None`)  
Bases: `stix.base.Entity`

**class** `stix.extensions.identity.ciq_identity_3_0.ElectronicAddressIdentifier` (`value=None, type_=None`)  
Bases: `stix.base.Entity`

**class** `stix.extensions.identity.ciq_identity_3_0.FreeTextAddress` (`address_lines=None`)  
Bases: `stix.base.Entity`

**class** `stix.extensions.identity.ciq_identity_3_0.FreeTextLine` (`value=None, type_=None`)  
Bases: `stix.base.Entity`

**class** `stix.extensions.identity.ciq_identity_3_0.Language` (`value=None`)  
Bases: `stix.base.Entity`

**class** `stix.extensions.identity.ciq_identity_3_0.NameElement` (`value=None, name_type=None, name_code=None, name_code_type=None`)  
Bases: `stix.base.Entity`

**class** `stix.extensions.identity.ciq_identity_3_0.NameLine` (`value=None, type_=None`)  
Bases: `stix.base.Entity`

**class** `stix.extensions.identity.ciq_identity_3_0.OrganisationInfo` (`industry_type=None`)  
Bases: `stix.base.Entity`

**class** `stix.extensions.identity.ciq_identity_3_0.OrganisationName` (`name_elements=None, subdivision_names=None, type_=None`)  
Bases: `stix.base.Entity`

**class** `stix.extensions.identity.ciq_identity_3_0.OrganisationNameElement` (`value=None, element_type=None`)  
Bases: `stix.extensions.identity.ciq_identity_3_0._BaseNameElement`

```
class stix.extensions.identity.ciq_identity_3_0.PartyName (name_lines=None, person_names=None, organisation_names=None)
    Bases: stix.base.Entity

class stix.extensions.identity.ciq_identity_3_0.PersonName (name_elements=None)
    Bases: stix.base.Entity

class stix.extensions.identity.ciq_identity_3_0.PersonNameElement (value=None, element_type=None)
    Bases: stix.extensions.identity.ciq_identity_3_0._BaseNameElement

class stix.extensions.identity.ciq_identity_3_0.SubDivisionName (value=None, type_=None)
    Bases: stix.base.Entity
```

## Constants

```
stix.extensions.identity.ciq_identity_3_0.XML_NS_XPIL = 'urn:oasis:names:tc:ciq:xpil:3'
str(object='') -> string
```

Return a nice string representation of the object. If the argument is a string, the return value is the same object.

```
stix.extensions.identity.ciq_identity_3_0.XML_NS_XNL = 'urn:oasis:names:tc:ciq:xnl:3'
str(object='') -> string
```

Return a nice string representation of the object. If the argument is a string, the return value is the same object.

```
stix.extensions.identity.ciq_identity_3_0.XML_NS_XAL = 'urn:oasis:names:tc:ciq:xal:3'
str(object='') -> string
```

Return a nice string representation of the object. If the argument is a string, the return value is the same object.

```
stix.extensions.identity.ciq_identity_3_0.XML_NS_STIX_EXT = 'http://stix.mitre.org/extensions/Identity#CIQ'
str(object='') -> string
```

Return a nice string representation of the object. If the argument is a string, the return value is the same object.

**Version:** 1.1.1.8

## stix.extensions.malware.maec\_4\_1\_malware Module

### Classes

```
class stix.extensions.malware.maec_4_1_malware.MAECInstance (maec=None)
    Bases: stix.ttp.malware_instance.MalwareInstance
```

**Version:** 1.1.1.8

## stix.extensions.marking.simple\_marking Module

### Classes

```
class stix.extensions.marking.simple_marking.SimpleMarkingStructure (statement=None)
    Bases: stix.data_marking.MarkingStructure
```

**Version:** 1.1.1.8

**stix.extensions.marking.terms\_of\_use\_marking Module****Classes**

```
class stix.extensions.marking.terms_of_use_marking.TermsOfUseMarkingStructure(terms_of_use=None)
    Bases: stix.data_marking.MarkingStructure
```

**Version:** 1.1.1.8

**stix.extensions.marking.tlp Module****Classes**

```
class stix.extensions.marking.tlp.TLPMarkingStructure(color=None)
    Bases: stix.data_marking.MarkingStructure
```

**Version:** 1.1.1.8

**stix.extensions.test\_mechanism.generic\_test\_mechanism Module****Classes**

```
class stix.extensions.test_mechanism.generic_test_mechanism.GenericTestMechanism(id_=None,
    idref=None)
    Bases: stix.indicator.test_mechanism._BaseTestMechanism
```

**Version:** 1.1.1.8

**stix.extensions.test\_mechanism.open\_ioc\_2010\_test\_mechanism Module****Classes**

```
class stix.extensions.test_mechanism.open_ioc_2010_test_mechanism.OpenIOTestMechanism(id_=None,
    idref=None)
    Bases: stix.indicator.test_mechanism._BaseTestMechanism
```

**Version:** 1.1.1.8

**stix.extensions.test\_mechanism.snort\_test\_mechanism Module****Classes**

```
class stix.extensions.test_mechanism.snort_test_mechanism.SnortTestMechanism(id_=None,
    idref=None)
    Bases: stix.indicator.test_mechanism._BaseTestMechanism
```

**Version:** 1.1.1.8

## `stix.extensions.test_mechanism.yara_test_mechanism` Module

### Classes

```
class stix.extensions.test_mechanism.yara_test_mechanism.YaraTestMechanism(id_=None,
                                                                           idref=None)
    Bases: stix.indicator.test_mechanism._BaseTestMechanism
```

## STIX Incident

Modules located in the `stix.incident` package

**Version:** 1.1.1.8

## `stix.incident` Module

### Classes

```
class stix.incident.Incident(id_=None, idref=None, timestamp=None, title=None, description=None, short_description=None)
    Bases: stix.base.BaseCoreComponent
```

Implementation of the STIX Incident.

#### Parameters

- **`id` (optional)** – An identifier. If None, a value will be generated via `mixbox.idgen.create_id()`. If set, this will unset the `idref` property.
- **`idref` (optional)** – An identifier reference. If set this will unset the `id` property.
- **`timestamp` (optional)** – A timestamp value. Can be an instance of `datetime.datetime` or `str`.
- **`description`** – A description of the purpose or intent of this object.
- **`short_description`** – A short description of the intent or purpose of this object.
- **`title`** – The title of this object.

**`add_affected_asset(v)`**

Adds a `AffectedAsset` object to the `affected_assets` collection.

**`add_category(category)`**

Adds a `VocabString` object to the `categories` collection.

If `category` is a string, an attempt will be made to convert it into an instance of `IncidentCategory`.

**`add_coa_requested(value)`**

Adds a `COARequested` object to the `coas_requested` collection.

**`add_coa_taken(value)`**

Adds a `COATaken` object to the `coas_taken` collection.

**`add_coordinator(value)`**

Adds a `InformationSource` object to the `coordinators` collection.

**`add_discovery_method(value)`**

Adds a `VocabString` object to the `discovery_methods` collection.

If `value` is a string, an attempt will be made to convert it to an instance of `DiscoveryMethod`.

**add\_external\_id**(*value*)

Adds a [ExternalID](#) object to the external\_ids collection.

**add\_intended\_effect**(*value*)

Adds a [Statement](#) object to the intended\_effects collection.

If *value* is a string, an attempt will be made to convert it into an instance of [Statement](#).

**add\_leveraged\_ttps**(*ttp*)

Adds a [RelatedTTP](#) value to the leveraged\_ttps collection.

**add\_related\_indicator**(*value*)

Adds an Related Indicator to the related\_indicators list property of this [Incident](#).

The *indicator* parameter must be an instance of [RelatedIndicator](#) or Indicator.

If the *indicator* parameter is None, no item will be added to the related\_indicators list property.

Calling this method is the same as calling append() on the related\_indicators property.

**See also:**

The [RelatedIndicators](#) documentation.

---

**Note:** If the *indicator* parameter is not an instance of [RelatedIndicator](#) an attempt will be made to convert it to one.

---

**Parameters** **value** – An instance of Indicator or [RelatedIndicator](#).

**Raises** ValueError – If the *indicator* parameter cannot be converted into an instance of [RelatedIndicator](#)

**add\_related\_observable**(*value*)

Adds a Related Observable to the related\_observables list property of this [Incident](#).

The *observable* parameter must be an instance of [RelatedObservable](#) or Observable.

If the *observable* parameter is None, no item will be added to the related\_observables list property.

Calling this method is the same as calling append() on the related\_observables property.

**See also:**

The [RelatedObservables](#) documentation.

---

**Note:** If the *observable* parameter is not an instance of [RelatedObservable](#) an attempt will be made to convert it to one.

---

**Parameters** **observable** – An instance of Observable or [RelatedObservable](#).

**Raises** ValueError – If the *value* parameter cannot be converted into an instance of [RelatedObservable](#)

**add\_responder**(*value*)

Adds a [InformationSource](#) object to the responders collection.

**add\_victim**(*victim*)

Adds a IdentityType value to the victims collection.

**class** stix.incident.**AttributedThreatActors**(*scope=None, \*args*)

Bases: [stix.common.related.GenericRelationshipList](#)

```
class stix.incident.LeveragedTTPs (scope=None, *args)
    Bases: stix.common.related.GenericRelationshipList

class stix.incident.RelatedIndicators (scope=None, *args)
    Bases: stix.common.related.GenericRelationshipList

class stix.incident.RelatedObservables (scope=None, *args)
    Bases: stix.common.related.GenericRelationshipList

class stix.incident.RelatedIncidents (scope=None, *args)
    Bases: stix.common.related.GenericRelationshipList
```

**Version:** 1.1.1.8

## **stix.incident.affected\_asset Module**

### **Classes**

```
class stix.incident.affected_asset.AffectedAsset
    Bases: stix.base.Entity

class stix.incident.affected_asset.AssetType (value=None, count_affected=None)
    Bases: stix.common.vocabs.VocabString

    is_plain()
        Override VocabString.is_plain()
```

**Version:** 1.1.1.8

## **stix.incident.coa Module**

### **Classes**

```
class stix.incident.coa.COATaken (course_of_action=None)
    Bases: stix.base.Entity

class stix.incident.coa.COATime (start=None, end=None)
    Bases: stix.base.Entity
```

**Version:** 1.1.1.8

## **stix.incident.contributors Module**

### **Classes**

```
class stix.incident.contributors.Contributors (*args)
    Bases: stix.base.EntityList
```

**Version:** 1.1.1.8

## **stix.incident.direct\_impact\_summary Module**

**Classes**

```
class stix.incident.direct_impact_summary.DirectImpactSummary
    Bases: stix.base.Entity
```

**Version:** 1.1.1.8

**stix.incident.external\_id Module****Classes**

```
class stix.incident.external_id.ExternalID (value=None, source=None)
    Bases: stix.base.Entity
```

**Version:** 1.1.1.8

**stix.incident.history Module****Classes**

```
class stix.incident.history.History (*args)
    Bases: stix.base.EntityList
```

```
class stix.incident.history.HistoryItem
    Bases: stix.base.Entity
```

```
class stix.incident.history.JournalEntry (value=None)
    Bases: stix.base.Entity
```

**Version:** 1.1.1.8

**stix.incident.impact\_assessment Module****Classes**

```
class stix.incident.impact_assessment.ImpactAssessment
    Bases: stix.base.Entity
```

**Version:** 1.1.1.8

**stix.incident.indirect\_impact\_summary Module****Classes**

```
class stix.incident.indirect_impact_summary.IndirectImpactSummary
    Bases: stix.base.Entity
```

**Version:** 1.1.1.8

**stix.incident.loss\_estimation Module**

**Classes**

```
class stix.incident.loss_estimation.LossEstimation
    Bases: stix.base.Entity
```

**Version:** 1.1.1.8

**stix.incident.property\_affected Module**

**Classes**

```
class stix.incident.property_affected.PropertyAffected
    Bases: stix.base.Entity
```

```
class stix.incident.property_affected.NonPublicDataCompromised(value=None,
                                                               data_encrypted=None)
    Bases: stix.common.vocabs.VocabString
```

**Version:** 1.1.1.8

**stix.incident.time Module**

**Classes**

```
class stix.incident.time.Time(first_malicious_action=None,
                               first_data_exfiltration=None,
                               incident_opened=None,
                               restoration_achieved=None,
                               initial_compromise=None,
                               incident_discovery=None,
                               containment_achieved=None,
                               incident_reported=None,
                               incident_closed=None)
    Bases: stix.base.Entity
```

**Version:** 1.1.1.8

**stix.incident.total\_loss\_estimation Module**

**Classes**

```
class stix.incident.total_loss_estimation.TotalLossEstimation
    Bases: stix.base.Entity
```

**STIX Indicator**

Modules located in the `stix.indicator` package

**Version:** 1.1.1.8

## stix.indicator.indicator Module

### Overview

The `stix.indicator.indicator` module implements IndicatorType STIX Language construct. The IndicatorType characterizes a cyber threat indicator made up of a pattern identifying certain observable conditions as well as contextual information about the patterns meaning, how and when it should be acted on, etc.

### Documentation Resources

- [Indicator Data Model](#)
- [Indicator Idioms](#)

### Classes

```
class stix.indicator.indicator.Indicator(id_=None,           idref=None,           times-
                                         timestamp=None,      title=None,      description=None,
                                         short_description=None)
```

Bases: `stix.base.BaseCoreComponent`

Implementation of the STIX Indicator.

#### Parameters

- **id** (*optional*) – An identifier. If None, a value will be generated via `mixbox.idgen.create_id()`. If set, this will unset the `idref` property.
- **idref** (*optional*) – An identifier reference. If set this will unset the `id_` property.
- **title** (*optional*) – A string title.
- **timestamp** (*optional*) – A timestamp value. Can be an instance of `datetime.datetime` or `str`.
- **description** (*optional*) – A string description.
- **short\_description** (*optional*) – A string short description.

`add_alternative_id(value)`

Adds an alternative id to the `alternative_id` list property.

---

**Note:** If `None` is passed in no value is added to the `alternative_id` list property.

---

**Parameters** `value` – An identifier value.

`add_indicated_ttp(v)`

Adds an Indicated TTP to the `indicated_ttps` list property of this `Indicator`.

The `v` parameter must be an instance of `stix.common.related.RelatedTTP` or `stix.ttp.TTP`.

If the `v` parameter is `None`, no item wil be added to the `indicated_ttps` list property.

---

**Note:** If the `v` parameter is not an instance of `stix.common.related.RelatedTTP` an attempt will be made to convert it to one.

---

**Parameters** `v` – An instance of `stix.common.related.RelatedTTP` or `stix.ttp.TTP`.

**Raises** `ValueError` – If the `v` parameter cannot be converted into an instance of `stix.common.related.RelatedTTP`

**add\_indicator\_type**(`value`)

Adds a value to the `indicator_types` list property.

The `value` parameter can be a `str` or an instance of `stix.common.vocab.VocabString`.

---

**Note:** If the `value` parameter is a `str` instance, an attempt will be made to convert it into an instance of `stix.common.vocab.IndicatorType`

---

**Parameters** `value` – An instance of `stix.common.vocab.VocabString` or `str`.

**Raises** `ValueError` – If the `value` param is a `str` instance that cannot be converted into an instance of `stix.common.vocab.IndicatorType`.

**add\_kill\_chain\_phase**(`value`)

Add a new Kill Chain Phase reference to this Indicator.

**Parameters** `value` – a `stix.common.kill_chains.KillChainPhase` or a `str` representing the phase\_id of. Note that you if you are defining a custom Kill Chain, you need to add it to the STIX package separately.

**add\_object**(`object_`)

Adds a python-cybox Object instance to the `observables` list property.

This is the same as calling `indicator.add_observable(object_)`.

---

**Note:** If the `object` param is not an instance of `cybox.core.Object` an attempt will be made to convert it into one before wrapping it in an `cybox.core.Observable` layer.

---

**Parameters** `object` – An instance of `cybox.core.Object` or an object that can be converted into an instance of `cybox.core.Observable`

**Raises** `ValueError` – if the `object_` param cannot be converted to an instance of `cybox.core.Observable`.

**add\_observable**(`observable`)

Adds an observable to the `observable` property of the `Indicator`.

If the `observable` parameter is `None`, no item will be added to the `observable` property.

---

**Note:** The STIX Language dictates that an `Indicator` can have only one Observable under it. Because of this, when a user adds another Observable a new, empty Observable will be created and append the existing and new observable using the `ObservableComposition` property. To access the top level Observable can be achieved by the `observable` property .By default, the operator of the composition layer will be set to "OR". The operator value can be changed via the `observable_composition_operator` property.

Setting `observable` or `observables` with re-initialize the property and lose all Observable in the composition layer.

---

**Parameters** `observable` – An instance of `cybox.core.Observable` or an object type that can be converted into one.

**Raises** `ValueError` – If the `observable` param cannot be converted into an instance of `cybox.core.Observable`.

**`add_related_campaign`(*value*)**

Adds a Related Campaign to this Indicator.

The `value` parameter must be an instance of `RelatedCampaignRef` or `CampaignRef`.

If the `value` parameter is `None`, no item wil be added to the `related_campaigns` collection.

Calling this method is the same as calling `append()` on the `related_campaigns` property.

**See also:**

The `RelatedCampaignRef` documentation.

---

**Note:** If the `value` parameter is not an instance of `RelatedCampaignRef` an attempt will be made to convert it to one.

---

**Parameters** `value` – An instance of `RelatedCampaignRef` or `Campaign`.

**Raises** `ValueError` – If the `value` parameter cannot be converted into an instance of `RelatedCampaignRef`

**`add_related_indicator`(*indicator*)**

Adds an Related Indicator to the `related_indicators` list property of this `Indicator`.

The `indicator` parameter must be an instance of `stix.common.related.RelatedIndicator` or `Indicator`.

If the `indicator` parameter is `None`, no item wil be added to the `related_indicators` list property.

Calling this method is the same as calling `append()` on the `related_indicators` proeprty.

**See also:**

The `RelatedIndicators` documentation.

---

**Note:** If the `tm` parameter is not an instance of `stix.common.related.RelatedIndicator` an attempt will be made to convert it to one.

---

**Parameters** `indicator` – An instance of `Indicator` or `stix.common.related.RelatedIndicator`.

**Raises** `ValueError` – If the `indicator` parameter cannot be converted into an instance of `stix.common.related.RelatedIndicator`

**`add_test_mechanism`(*tm*)**

Adds an Test Mechanism to the `test_mechanisms` list property of this `Indicator`.

The `tm` parameter must be an instance of a `stix.indicator.test_mechanism._BaseTestMechanism` implementation.

If the `tm` parameter is `None`, no item will be added to the `test_mechanisms` list property.

**See also:**

Test Mechanism implementations are found under the `stix.extensions.test_mechanism` package.

**Parameters** `tm` – An instance of a `stix.indicator.test_mechanism._BaseTestMechanism` implementation.

**Raises** `ValueError` – If the `tm` parameter is not an instance of `stix.indicator.test_mechanism._BaseTestMechanism`

**add\_valid\_time\_position** (`value`)

Adds an valid time position to the `valid_time_positions` property list.

If `value` is `None`, no item is added to the `value_time_positions` list.

**Parameters** `value` – An instance of `stix.indicator.valid_time.ValidTime`.

**Raises** `ValueError` – If the `value` argument is not an instance of `stix.indicator.valid_time.ValidTime`.

**get\_produced\_time** ()

Gets the produced time for this `Indicator`.

This is the same as calling `produced_time = indicator.producer.time.produced_time`.

**Returns** `None` or an instance of `cybox.common.DateTimeWithPrecision`.

**get\_received\_time** ()

Gets the received time for this `Indicator`.

This is the same as calling `received_time = indicator.producer.time.received_time`.

**Returns** `None` or an instance of `cybox.common.DateTimeWithPrecision`.

**observables**

A list of `cybox.core.Observable` instances. This can be set to a single object instance or a list of objects.

---

**Note:** If only one Observable is set, this property will return a list with the `observable` property.

If multiple `cybox.core.Observable` this property will return Observables under the `cybox.core.ObservableComposition`.

Access to the top level `cybox.core.Observable` is made via `observable` property.

---

**Default Value:** Empty list.

**Returns** A list of `cybox.core.Observable` instances.

**set\_produced\_time** (`produced_time`)

Sets the `produced_time` property of the `producer` property instance fo `produced_time`.

This is the same as calling `indicator.producer.time.produced_time = produced_time`.

The `produced_time` parameter must be an instance of `str`, `datetime.datetime`, or `cybox.common.DateTimeWithPrecision`.

---

**Note:** If `produced_time` is a `str` or `datetime.datetime` instance an attempt will be made to convert it into an instance of `cybox.common.DateTimeWithPrecision`.

---

---

**Parameters** `produced_time` – An instance of str, datetime.datetime, or cybox.common.DateTimeWithPrecision.

**set\_producer\_identity**(*identity*)

Sets the name of the producer of this indicator.

This is the same as calling `indicator.producer.identity.name = identity`.

If the `producer` property is None, it will be initialized to an instance of `stix.common.information_source.InformationSource`.

If the `identity` property of the `producer` instance is None, it will be initialized to an instance of `stix.common.identity.Identity`.

---

**Note:** if the `identity` parameter is not an instance `stix.common.identity.Identity` an attempt will be made to convert it to one.

---

**Parameters** `identity` – An instance of str or `stix.common.identity.Identity`.

**set\_received\_time**(*received\_time*)

Sets the received time for this `Indicator`.

This is the same as calling `indicator.producer.time.produced_time = produced_time`.

The `received_time` parameter must be an instance of str, datetime.datetime, or cybox.common.DateTimeWithPrecision.

**Parameters** `received_time` – An instance of str, datetime.datetime, or cybox.common.DateTimeWithPrecision.

---

**Note:** If `received_time` is a str or datetime.datetime instance an attempt will be made to convert it into an instance of cybox.common.DateTimeWithPrecision.

---

**class** `stix.indicator.indicator.CompositeIndicatorExpression(operator='OR', *args)`

Bases: mixbox.entities.EntityList

Implementation of the STIX CompositeIndicatorExpressionType.

The `CompositeIndicatorExpression` class implements methods found on `collections.MutableSequence` and as such can be interacted with as a list (e.g., `append()`).

---

**Note:** The `append()` method can only accept instances of `Indicator`.

---

## Examples

Add a `Indicator` instance to an instance of `CompositeIndicatorExpression`:

```
>>> i = Indicator()
>>> comp = CompositeIndicatorExpression()
>>> comp.append(i)
```

Create a `CompositeIndicatorExpression` from a list of `Indicator` instances using `*args` argument list:

```
>>> list_indicators = [Indicator() for i in xrange(10)]
>>> comp = CompositeIndicatorExpression(CompositeIndicatorExpression.OP_OR, *list_indicators)
>>> len(comp)
10
```

## Parameters

- **operator** (*str, optional*) – The logical composition operator. Must be "AND" or "OR".
- **\*args** – Variable length argument list of *Indicator* instances.

### OP\_AND

*str*

String "AND"

### OP\_OR

*str*

String "OR"

### OPERATORS

*tuple*

Tuple of allowed operator values.

### operator

*str*

The logical composition operator. Must be "AND" or "OR".

**class** stix.indicator.indicator.RelatedIndicators (*related\_indicators=None, scope=None*)  
Bases: *stix.common.related.GenericRelationshipList*

The RelatedIndicators class provides functionality for adding *stix.common.related.RelatedIndicator* instances to an *Indicator* instance.

The RelatedIndicators class implements methods found on *collections.MutableSequence* and as such can be interacted with as a list (e.g., *append()*).

The *append()* method can accept instances of *stix.common.related.RelatedIndicator* or *Indicator* as an argument.

---

**Note:** Calling *append()* with an instance of *stix.coa.CourseOfAction* will wrap that instance in a *stix.common.related.RelatedIndicator* layer, with item set to the *Indicator* instance.

---

## Examples

Append an instance of *Indicator* to the *Indicator.related\_indicators* property. The instance of *Indicator* will be wrapped in an instance of *stix.common.related.RelatedIndicator*:

```
>>> related = Indicator()
>>> parent_indicator = Indicator()
>>> parent_indicator.related_indicators.append(related)
>>> print(type(indicator.related_indicators[0]))
<class 'stix.common.related.RelatedIndicator'>
```

Iterate over the *related\_indicators* property of an *Indicator* instance and print the ids of each underlying *Indicator* instance:

```
>>> for related in indicator.related_indicators:
>>>     print(related.item.id_)
```

### Parameters

- **related\_indicators** (*list, optional*) – A list of *Indicator* or *stix.common.related.RelatedIndicator* instances.
- **scope** (*str, optional*) – The scope of the items. Can be set to "inclusive" or "exclusive". See *stix.common.related.GenericRelationshipList* documentation for more information.

#### scope

*str*

The scope of the items. Can be set to "inclusive" or "exclusive". See *stix.common.related.GenericRelationshipList* documentation for more information.

**class** *stix.indicator.indicator.SuggestedCOAs* (*suggested\_coas=None, scope=None*)

Bases: *stix.common.related.GenericRelationshipList*

The SuggestedCOAs class provides functionality for adding *stix.common.related.RelatedCOA* instances to an *Indicator* instance.

The SuggestedCOAs class implements methods found on *collections.MutableSequence* and as such can be interacted with as a list (e.g., *append()*).

The *append()* method can accept instances of *stix.common.related.RelatedCOA* or *stix.coa.CourseOfAction* as an argument.

---

**Note:** Calling *append()* with an instance of *stix.coa.CourseOfAction* will wrap that instance in a *stix.common.related.RelatedCOA* layer, with the item set to the *stix.coa.CourseOfAction* instance.

---

### Examples

Append an instance of *stix.coa.CourseOfAction* to the *Indicator.suggested\_coas* property. The instance of *stix.coa.CourseOfAction* will be wrapped in an instance of *stix.common.related.RelatedCOA*.

```
>>> coa = CourseOfAction()
>>> indicator = Indicator()
>>> indicator.suggested_coas.append(coa)
>>> print(type(indicator.suggested_coas[0]))
<class 'stix.common.related.RelatedCOA'>
```

Iterate over the *suggested\_coas* property of an *Indicator* instance and print the ids of each underlying *stix.coa.CourseOfAction* instance.

```
>>> for related_coa in indicator.suggested_coas:
>>>     print(related_coa.item.id_)
```

### Parameters

- **suggested\_coas** (*list*) – A list of *stix.coa.CourseOfAction* or *stix.common.related.RelatedCOA* instances.

- **scope** (*str*) – The scope of the items. Can be set to "inclusive" or "exclusive". See `stix.common.related.GenericRelationshipList` documentation for more information.

**scope**

*str*

The scope of the items. Can be set to "inclusive" or "exclusive". See `stix.common.related.GenericRelationshipList` documentation for more information.

**class** `stix.indicator.indicator.IndicatorTypes(*args)`

Bases: `stix.base.TypedList`

A `stix.common.vocabs.VocabString` collection which defaults to `stix.common.vocabs.IndicatorType`. This class implements methods found on `collections.MutableSequence` and as such can be interacted with like a list.

---

**Note:** The `append()` method can accept `str` or `stix.common.vocabs.VocabString` instances. If a `str` instance is passed in, an attempt will be made to convert it to an instance of `stix.common.vocabs.IndicatorType`.

---

## Examples

Add an instance of `stix.common.vocabs.IndicatorType`:

```
>>> from stix.common.vocabs import IndicatorType
>>> itypes = IndicatorTypes()
>>> type_ = IndicatorType(IndicatorType.TERM_IP_WATCHLIST)
>>> itypes.append(type_)
>>> print(len(itypes))
1
```

Add a string value:

```
>>> from stix.common.vocabs import IndicatorType
>>> itypes = IndicatorTypes()
>>> type_(IndicatorType.TERM_IP_WATCHLIST)
<type 'str'>
>>> itypes.append(IndicatorType.TERM_IP_WATCHLIST)
>>> print(len(itypes))
1
```

**Parameters** `*args` – Variable length argument list of strings or `stix.common.vocabs.VocabString` instances.

**Version:** 1.1.1.8

## `stix.indicator.sightings` Module

### Classes

**class** `stix.indicator.sightings.Sighting(timestamp=None, timestamp_precision=None, description=None)`

Bases: `stix.base.Entity`

```
class stix.indicator.sightings.Sightings(sightings_count=None, *args)
    Bases: stix.base.EntityList

class stix.indicator.sightings.RelatedObservables(scope=None, *args)
    Bases: stix.common.related.GenericRelationshipList
```

**Version:** 1.1.1.8

## stix.indicator.test\_mechanism Module

### Classes

```
class stix.indicator.test_mechanism._BaseTestMechanism(id_=None, idref=None)
    Bases: stix.base.Entity
```

### Functions

```
stix.indicator.test_mechanism.add_extension(cls)
```

Registers a stix.Entity class as an implementation of an xml type.

Classes must have an \_XSI\_TYPE class attributes to be registered. The value of this attribute must be a valid xsi:type.

---

**Note:** This was designed for internal use.

---

### Constants

**Version:** 1.1.1.8

## stix.indicator.valid\_time Module

### Classes

```
class stix.indicator.valid_time.ValidTime(start_time=None, end_time=None)
    Bases: mixbox.entities.Entity
```

## STIX Threat Actor

Modules located in the `stix.threat_actor` package

**Version:** 1.1.1.8

## stix.threat\_actor Module

### Classes

```
class stix.threat_actor.ThreatActor(id_=None, idref=None, timestamp=None, title=None, de-
    scription=None, short_description=None)
    Bases: stix.base.BaseCoreComponent
```

Implementation of the STIX Threat Actor.

#### Parameters

- **id** (*optional*) – An identifier. If None, a value will be generated via `mixbox.idgen.create_id()`. If set, this will unset the `idref` property.
- **idref** (*optional*) – An identifier reference. If set this will unset the `id_` property.
- **timestamp** (*optional*) – A timestamp value. Can be an instance of `datetime.datetime` or `str`.
- **description** – A description of the purpose or intent of this object.
- **short\_description** – A short description of the intent or purpose of this object.
- **title** – The title of this object.

#### `add_intended_effect(value)`

Adds a `Statement` object to the `intended_effects` collection.

If `value` is a string, an attempt will be made to convert it into an instance of `Statement`.

#### `add_motivation(value)`

Adds a `Motivation` object to the `motivations` collection.

#### `add_planning_and_operational_support(value)`

Adds a `VocabString` object to the `planning_and_operational_supports` collection.

If `value` is a string, an attempt will be made to convert it to an instance of `PlanningAndOperationalSupport`.

#### `add_sophistication(value)`

Adds a `VocabString` object to the `sophistications` collection.

If `value` is a string, an attempt will be made to convert it to an instance of `ThreatActorSophistication`.

#### `add_type(value)`

Adds a `VocabString` object to the `types` collection.

If set to a string, an attempt will be made to convert it into an instance of `ThreatActorType`.

**class** `stix.threat_actor.AssociatedActors(scope=None, *args)`

Bases: `stix.common.related.GenericRelationshipList`

**class** `stix.threat_actor.AssociatedCampaigns(scope=None, *args)`

Bases: `stix.common.related.GenericRelationshipList`

**class** `stix.threat_actor.ObservedTTPs(scope=None, *args)`

Bases: `stix.common.related.GenericRelationshipList`

## STIX Tactics, Techniques, and Procedures (TTP)

Modules located in the `stix.ttp` package

**Version:** 1.1.1.8

### `stix.ttp` Module

## Classes

**class stix.ttp.TTP (*id\_=None*, *idref=None*, *timestamp=None*, *title=None*, *description=None*, *short\_description=None*)**  
Bases: stix.base.BaseCoreComponent

Implementation of the STIX TTP.

### Parameters

- **`id`** (*optional*) – An identifier. If None, a value will be generated via `mixbox.idgen.create_id()`. If set, this will unset the `idref` property.
- **`idref`** (*optional*) – An identifier reference. If set this will unset the `id_` property.
- **`timestamp`** (*optional*) – A timestamp value. Can be an instance of `datetime.datetime` or `str`.
- **`description`** – A description of the purpose or intent of this object.
- **`short_description`** – A short description of the intent or purpose of this object.
- **`title`** – The title of this object.

**`add_exploit_target(value)`**

Adds a `ExploitTarget` object to the `exploit_targets` collection.

**`add_intended_effect(value)`**

Adds a `Statement` object to the `intended_effects` collection.

If *value* is a string, an attempt will be made to convert it into an instance of `Statement`.

**`add_kill_chain_phase(value)`**

Adds a `KillChainPhaseReference` to the `kill_chain_phases` collection.

**Parameters `value`** – A `KillChainPhase`, `KillChainPhaseReference` or a `str` representing the `phase_id` of. Note that you if you are defining a custom Kill Chain, you need to add it to the STIX package separately.

**`add_related_package(value)`**

Adds a `RelatedPackageRef` object to the `related_packages` collection.

**Parameters `value`** – A `RelatedPackageRef` or a `STIXPackage` object.

**`add_related_ttp(value)`**

Adds an Related TTP to the `related_ttts` list property of this `TTP`.

The `TTP` parameter must be an instance of `RelatedTTP` or `TTP`.

If the `TTP` parameter is `None`, no item wil be added to the `related_ttts` list property.

Calling this method is the same as calling `append()` on the `related_ttts` property.

#### See also:

The `RelatedTTPs` documentation.

---

**Note:** If the `TTP` parameter is not an instance of `RelatedTTP` an attempt will be made to convert it to one.

---

**Parameters `value`** – An instance of `TTP` or `RelatedTTP`.

**Raises `ValueError`** – If the `TTP` parameter cannot be converted into an instance of `RelatedTTP`

**Version:** 1.1.1.8

## **stix.ttp.attack\_pattern Module**

### **Classes**

**class** stix.ttp.attack\_pattern.**AttackPattern** (*id\_=None*, *idref=None*, *title=None*, *description=None*, *short\_description=None*)

Bases: *stix.base.Entity*

**Version:** 1.1.1.8

## **stix.ttp.behavior Module**

### **Classes**

**class** stix.ttp.behavior.**Behavior** (*malware\_instances=None*, *attack\_patterns=None*, *exploits=None*)

Bases: *stix.base.Entity*

**Version:** 1.1.1.8

## **stix.ttp.exploit Module**

### **Classes**

**class** stix.ttp.exploit.**Exploit** (*id\_=None*, *idref=None*, *title=None*, *description=None*, *short\_description=None*)

Bases: *stix.base.Entity*

**Version:** 1.1.1.8

## **stix.ttp.exploit\_targets Module**

### **Classes**

**class** stix.ttp.exploit\_targets.**ExploitTargets** (*scope=None*, \**args*)

Bases: *stix.common.related.GenericRelationshipList*

**Version:** 1.1.1.8

## **stix.ttp.infrastructure Module**

### **Classes**

**class** stix.ttp.infrastructure.**Infrastructure** (*id\_=None*, *idref=None*, *title=None*, *description=None*, *short\_description=None*)

Bases: *stix.base.Entity*

**Version:** 1.1.1.8

## stix.ttp.malware\_instance Module

### Classes

```
class stix.ttp.malware_instance.MalwareInstance (id_=None, idref=None, title=None, description=None, short_description=None)
    Bases: stix.base.Entity
```

### Functions

```
stix.ttp.malware_instance.add_extension (cls)
    Registers a stix.Entity class as an implementation of an xml type.
```

Classes must have an \_XSI\_TYPE class attributes to be registered. The value of this attribute must be a valid xsi:type.

---

**Note:** This was designed for internal use.

---

### Constants

**Version:** 1.1.1.8

## stix.ttp.related\_ttps Module

### Classes

```
class stix.ttp.related_ttps.RelatedTTPs (scope=None, *args)
    Bases: stix.common.related.GenericRelationshipList
```

**Version:** 1.1.1.8

## stix.ttp.resource Module

### Classes

```
class stix.ttp.resource.Resource (tools=None, infrastructure=None, personas=None)
    Bases: stix.base.Entity
```

**Version:** 1.1.1.8

## stix.ttp.victim\_targeting Module

### Classes

```
class stix.ttp.victim_targeting.VictimTargeting
    Bases: stix.base.Entity
```

## STIX Utils

Modules located in the `stix.utils` package

**Version:** 1.1.1.8

### `stix.utils.dates` Module

#### Functions

`stix.utils.dates.parse_value(value)`

Attempts to parse `value` into an instance of `datetime.datetime`. If `value` is `None`, this function will return `None`.

**Parameters** `value` – A timestamp. This can be a string or `datetime.datetime` value.

`stix.utils.dates.serialize_value(value)`

Attempts to convert `value` into an ISO8601-compliant timestamp string. If `value` is `None`, `None` will be returned.

**Parameters** `value` – A `datetime.datetime` value.

**Returns** An ISO8601 formatted timestamp string.

**Version:** 1.1.1.8

### `stix.utils.idgen` Module

#### Classes

`class stix.utils.idgen.IDGenerator(namespace=None, method=1)`

Bases: `object`

Utility class for generating STIX ids

`create_id(prefix='guid')`

Create an ID.

Note that if `prefix` is not provided, it will be `quid`, even if the `method` is `METHOD_INT`.

`class stix.utils.idgen.InvalidMethodError(method)`

Bases: `exceptions.ValueError`

#### Functions

`stix.utils.idgen._get_generator()`

Return the `stix.utils` module's generator object.

Only under rare circumstances should this function be called by external code. More likely, external code should initialize its own `IDGenerator` or use the `set_id_namespace`, `set_id_method`, or `create_id` functions of the `stix.utils` module.

`stix.utils.idgen.set_id_namespace(namespace)`

Set the namespace for the module-level ID Generator

`stix.utils.idgen.set_id_method(method)`

Set the method for the module-level ID Generator

```
stix.utils.idgen.get_id_namespace()
    Return the namespace associated with generated ids

stix.utils.idgen.get_id_namespace_alias()
    Returns the namespace alias associated with generated ids

stix.utils.idgen.create_id(prefix=None)
    Create an ID using the module-level ID Generator
```

## Constants

```
stix.utils.idgen.__generator = None
stix.utils.idgen.EXAMPLE_NAMESPACE = {'http://example.com': 'example'}
    dict() -> new empty dictionary dict(mapping) -> new dictionary initialized from a mapping object's
        (key, value) pairs

    dict(iterable) -> new dictionary initialized as if via: d = {} for k, v in iterable:
        d[k] = v

    dict(**kwargs) -> new dictionary initialized with the name=value pairs in the keyword argument list. For
        example: dict(one=1, two=2)
```

**Version:** 1.1.1.8

## stix.utils.nsparser Module

### Classes

### Constants

**Version:** 1.1.1.8

## stix.utils.parser Module

### Classes

```
class stix.utils.parser.UnsupportedVersionError(message, expected=None, found=None)
    Bases: exceptions.Exception

    A parsed document is a version unsupported by the parser.

class stix.utils.parser.UnknownVersionError
    Bases: exceptions.Exception

    A parsed document contains no version information.

stix.utils.parser.UnsupportedRootElement
    alias of UnsupportedRootElementError

class stix.utils.parser.EntityParser
    Bases: mixbox.parser.EntityParser
```

**Version:** 1.1.1.8

## API Coverage

The *python-stix* APIs currently provide partial coverage of all STIX-defined constructs. Development is ongoing toward the goal of providing full STIX language support in the APIs. Until such time that full coverage is provided, an overview of which constructs are available in these APIs will be maintained below.

---

**Note:** Many STIX constructs can contain CybOX constructs. The [python-cybox](#) project provides its own APIs for interacting with the CybOX specification. Please see the [CybOX API Documentation](#) for information about CybOX API coverage.

---

## Contributing

---

If a bug is found, a feature is missing, or something just isn't behaving the way you'd expect it to, please submit an issue to our [tracker](#). If you'd like to contribute code to our repository, you can do so by issuing a [pull request](#) and we will work with you to try and integrate that code into our repository.

## V

ValidTime (class in stix.indicator.valid\_time), 49  
 value (stix.common.structured\_text.StructuredText attribute), 24  
 VictimTargeting (class in stix.ttp.victim\_targeting), 53  
 VocabString (class in stix.common.vocab), 24  
 Vulnerability (class in stix.exploit\_target.vulnerability), 31

## W

Weakness (class in stix.exploit\_target.weakness), [32](#)

## X

XML\_NS\_STIX\_EXT (in module  
stix.extensions.identity.ciq\_identity\_3\_0),  
[34](#)

XML\_NS\_XAL (in module  
stix.extensions.identity.ciq\_identity\_3\_0),  
[34](#)

XML\_NS\_XNL (in module  
stix.extensions.identity.ciq\_identity\_3\_0),  
[34](#)

XML\_NS\_XPIL (in module  
stix.extensions.identity.ciq\_identity\_3\_0),  
[34](#)

## Y

YaraTestMechanism (class in  
stix.extensions.test\_mechanism.yara\_test\_mechanism),  
[36](#)
